

Enclosure 4

SINGLE EUROPEAN SKY
(SES) REGULATIONS

***DRAFT MAINTENANCE MECHANISM FOR
STANDARDISED EUROPEAN RULES
OF THE AIR***

The SERA mandate required that the draft include mechanisms to ensure an efficient process for maintenance and update which would enable ongoing consistency with new ICAO provisions.

Based on the mandate requirements and the initial plan for SERA, a possible approach to the maintenance mechanism has been developed and presented at the workshop. As described in the outcome of the consultation, it has been clearly expressed that such a mechanism should permit sufficient involvement of the Member States and be implemented and able to be reactive without delay. The draft implementing rule does not cover the creation of such a mechanism but contains articles which are compatible with the following proposed approach.
