MUAC Customer Service

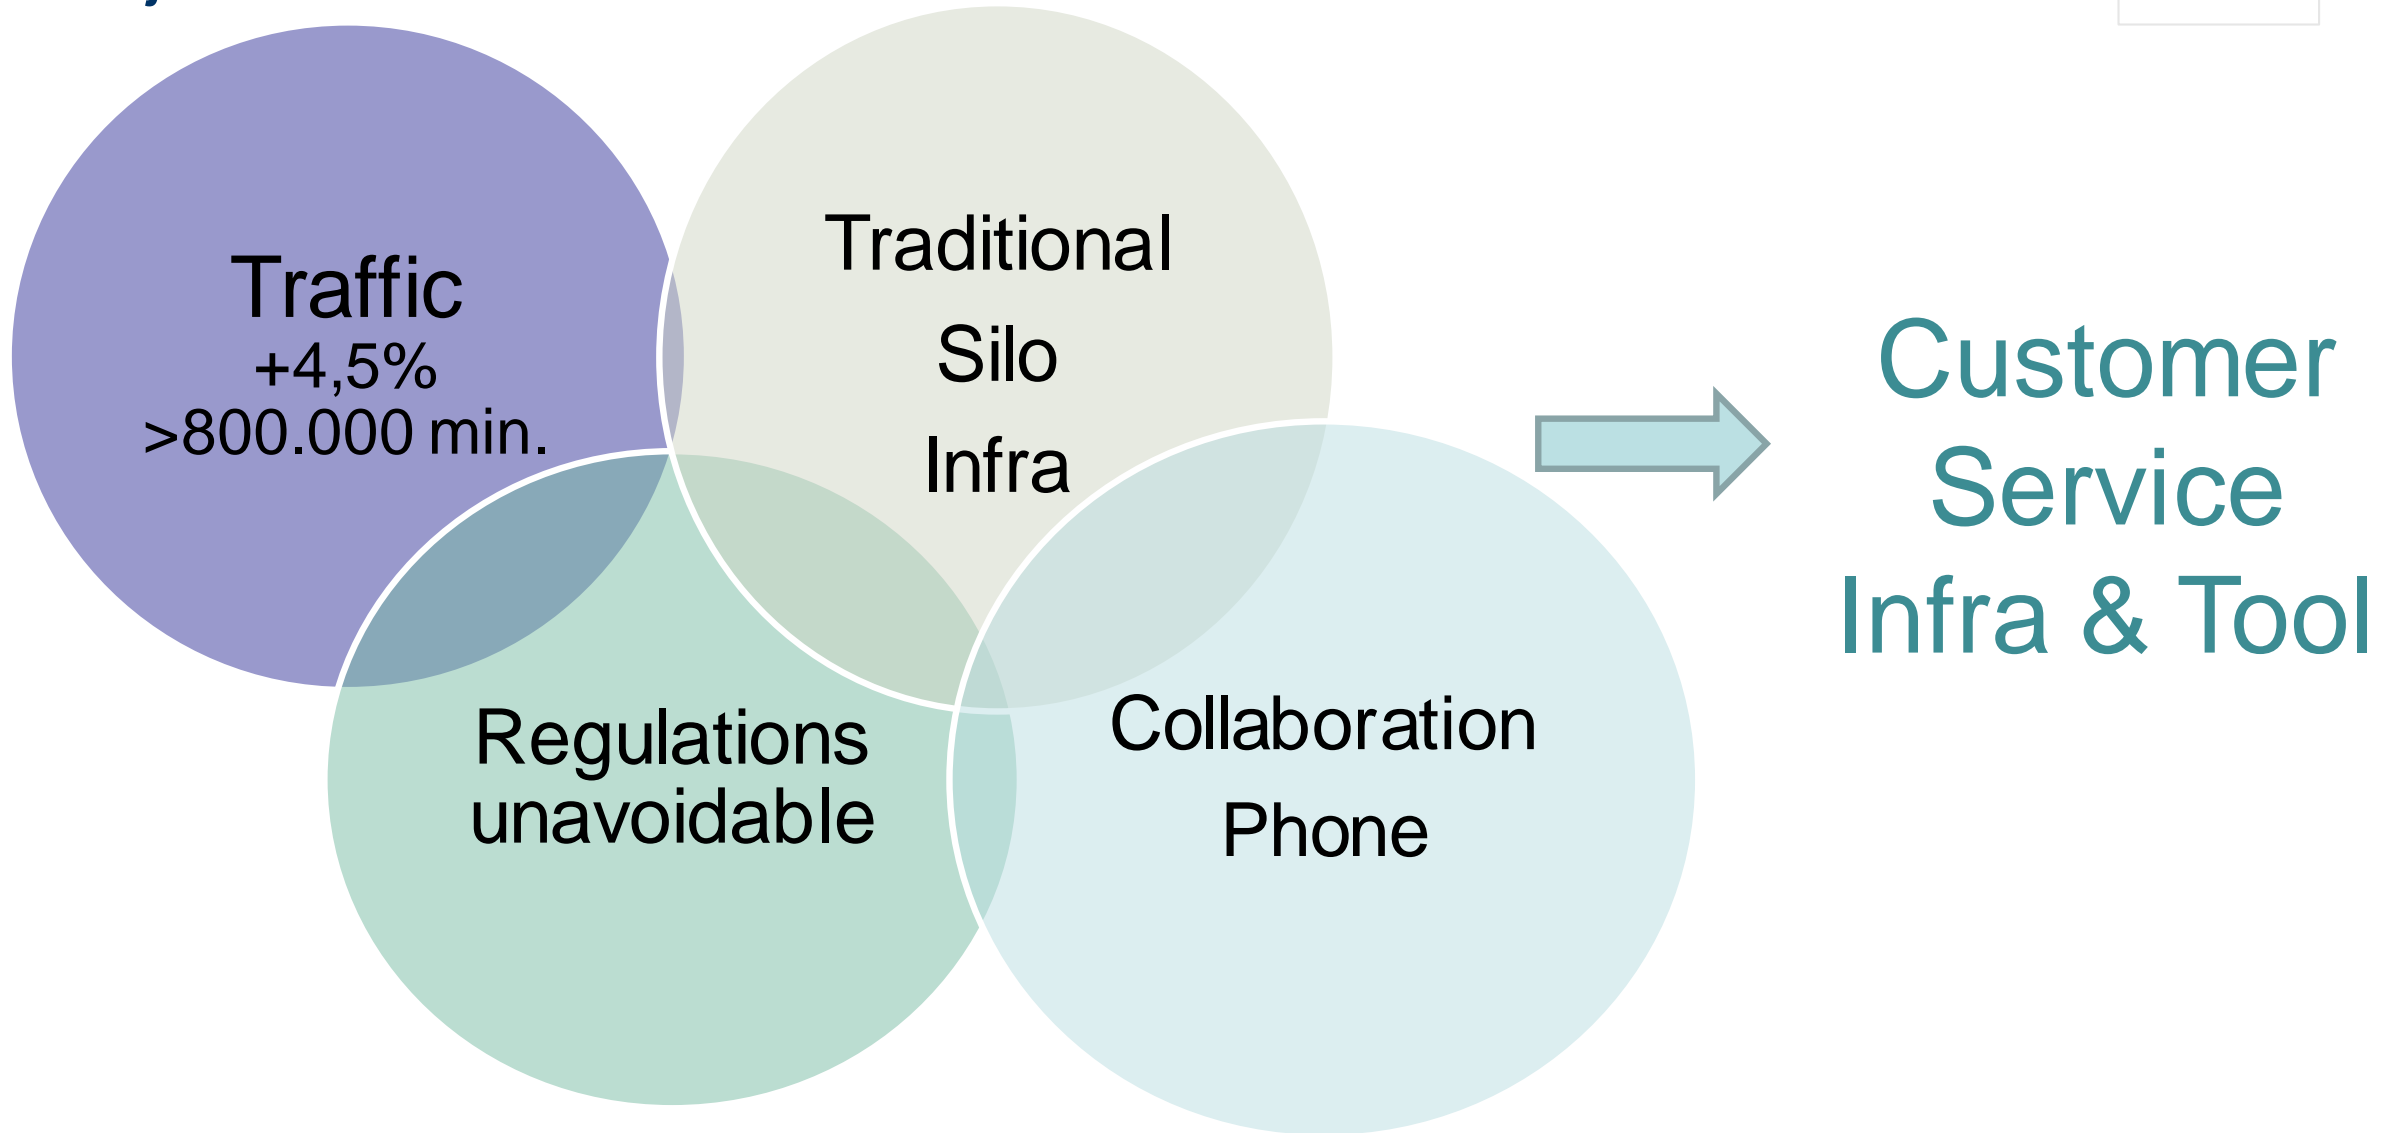

Eric CARPENTIER
MUAC ATMP PJM

07 November 2019

Project started in 2016

ATFCM

Customer Service Tool

Open architecture
Service bus, Web
+ e-mail access

Rely on ATM
standards

SESAR SWIM

Access to NM
data via B2B

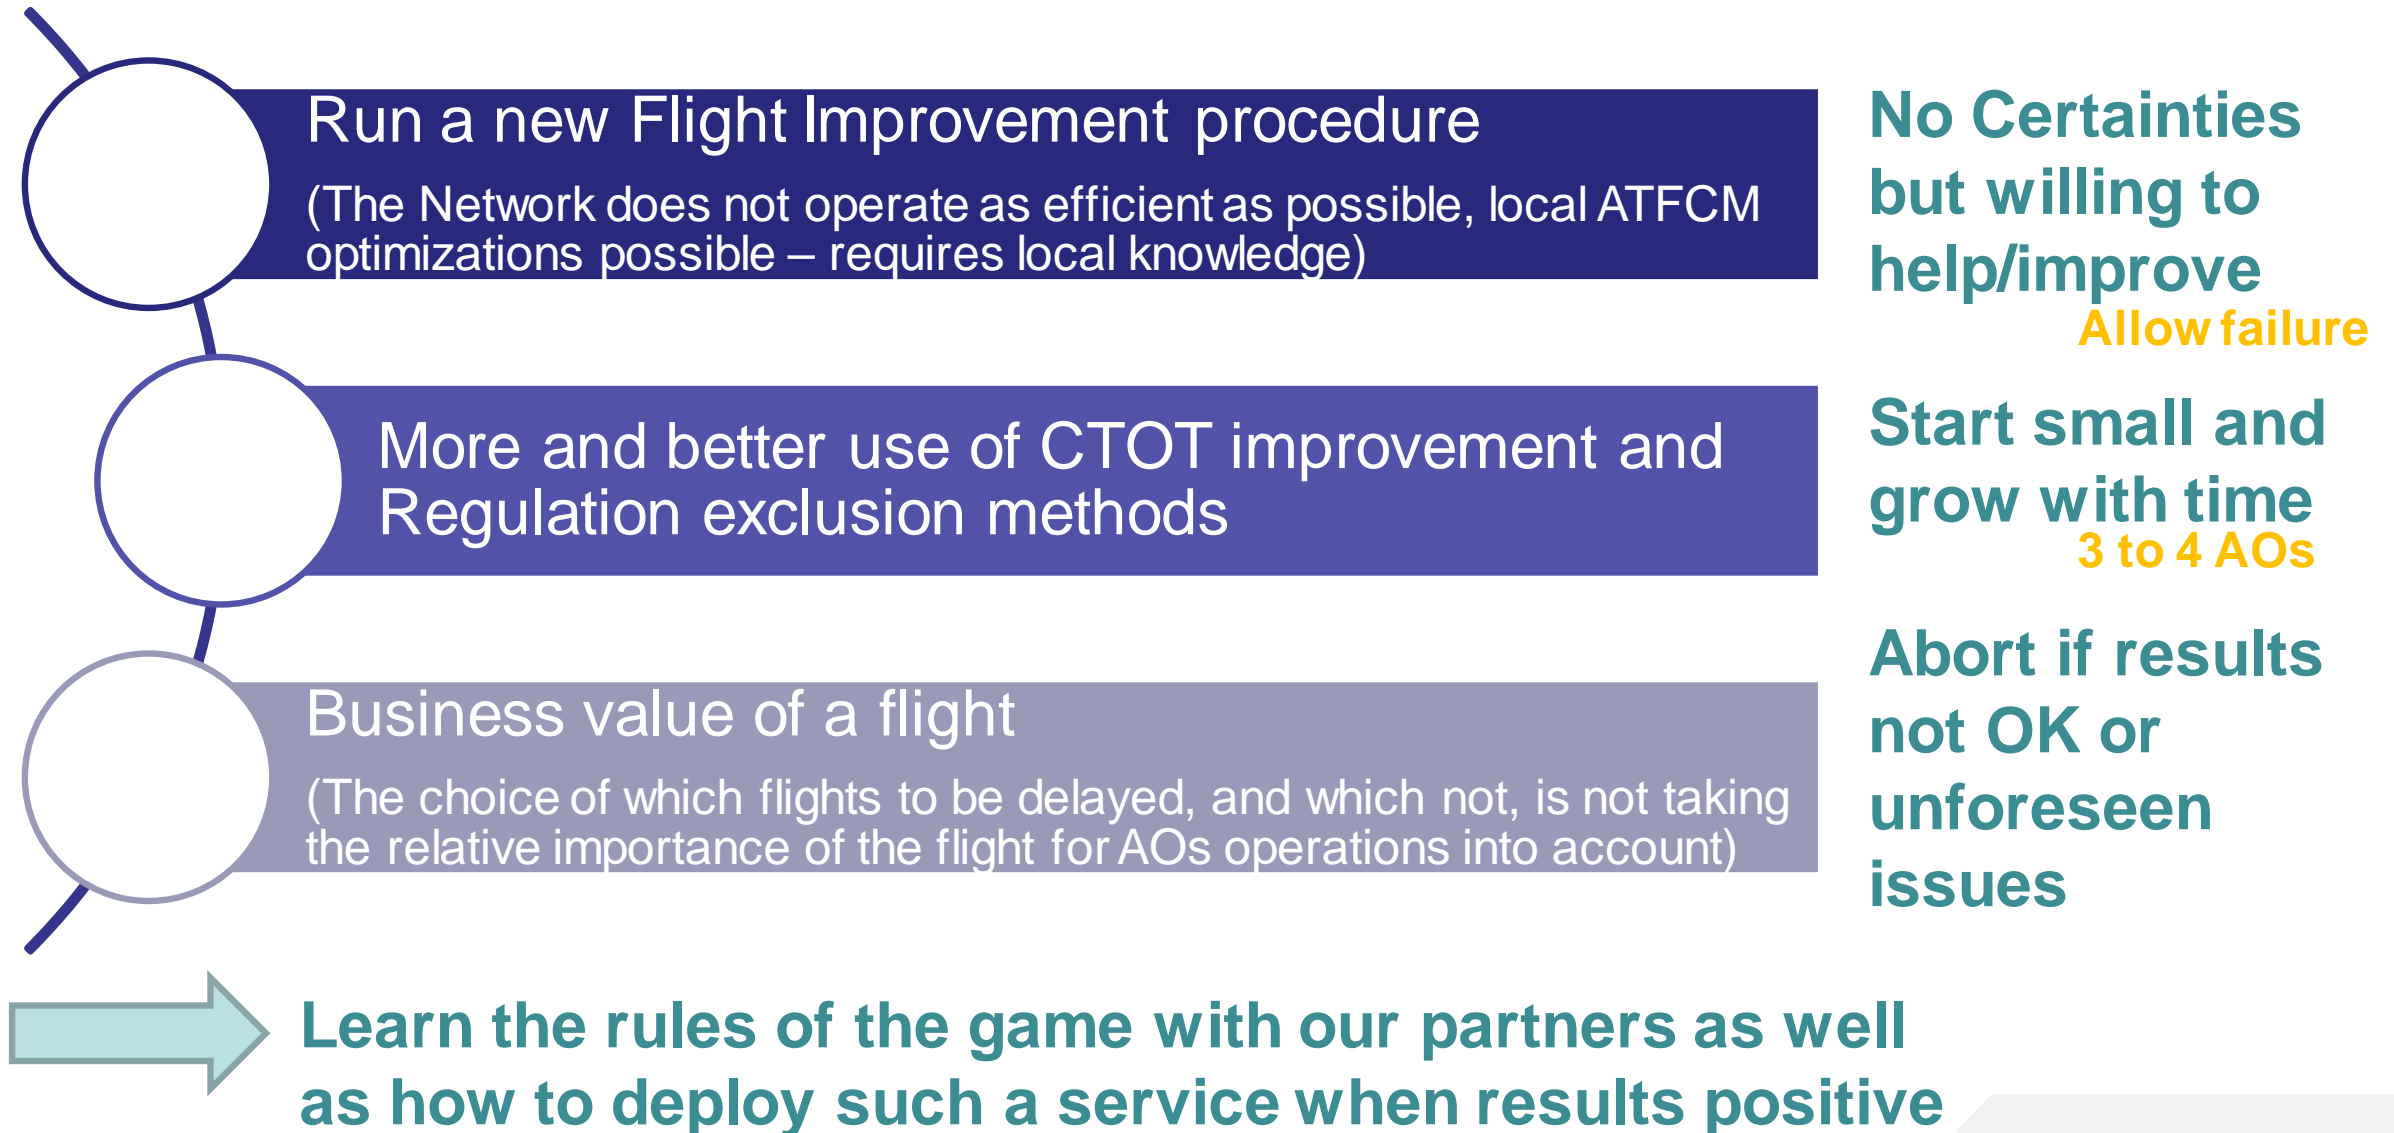

Local ATFCM
Optimization

Address delay
where it most
matters

Allow AOs to
request support

2017 – 1st Customer initiative trial – No tool support

2018 – 2nd Customer Initiative trial – ATMP V1.0

Develop the Flight Improvement procedures further

Send CTOT improvement and Regulation exclusion requests via e-mail to NM DOM (allow more requests)

Allow selected AOs to report on their business critical flights (Prio flights) and provide a business value view to MUAC FMPs

ATMP JOIN SESAR PJ24

Check if the prio flight concept can grow and ability from the network to process more optimizations

**No Certainties
but willing to
help/improve**

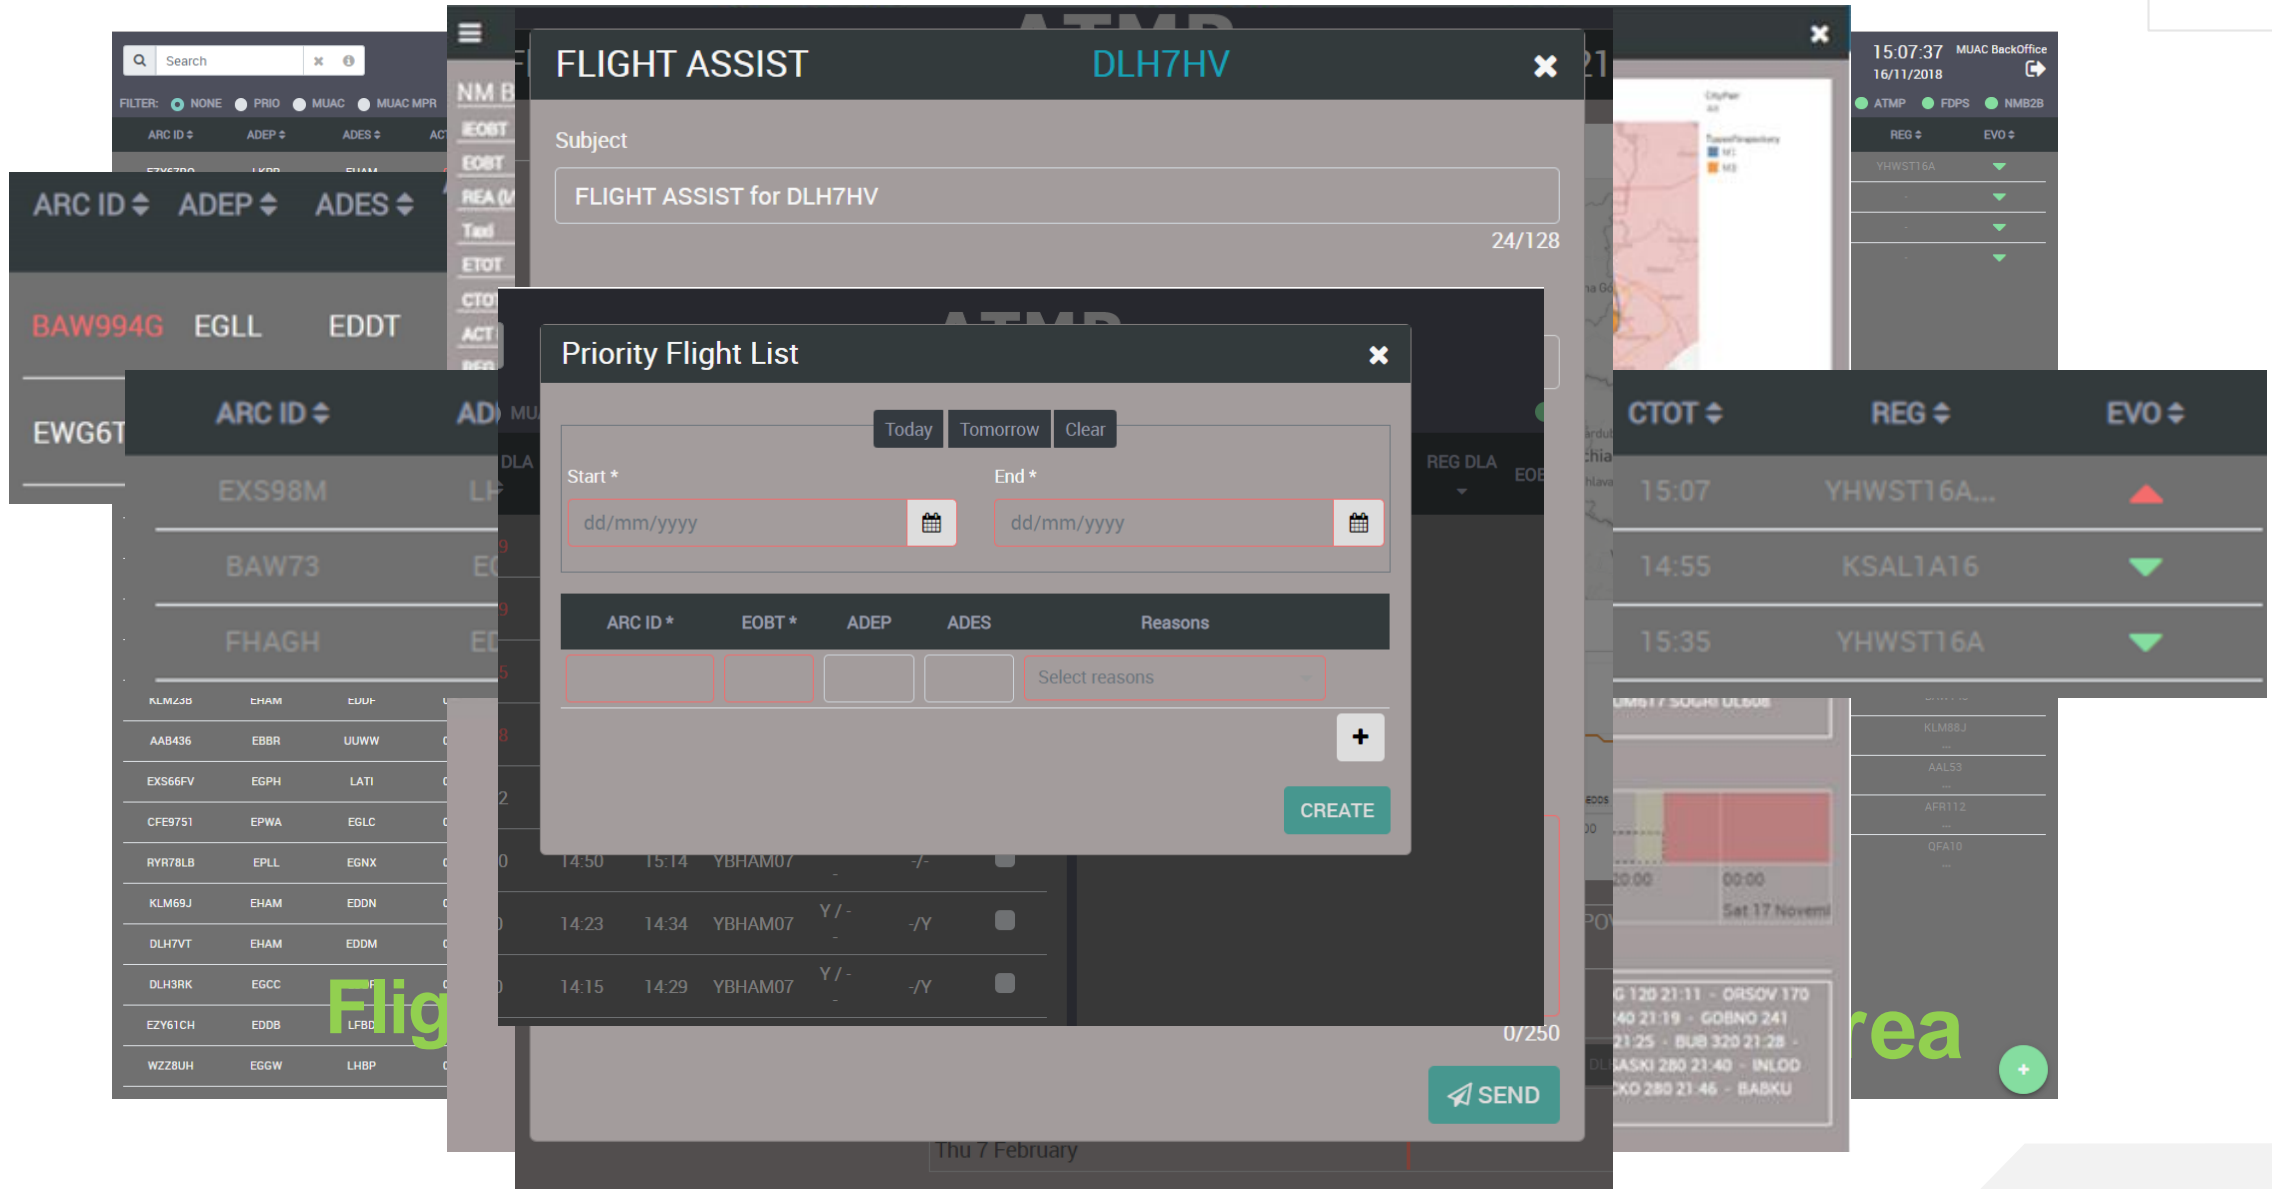

Allow failure

**Start small and
grow with time**

7 to 8 AOs

**Abort if results
not OK or
unforeseen
issues**

2018 – 2nd Customer Initiative trial – ATMP V1.0

The screenshot displays the ATMP V1.0 interface, which includes several overlapping windows and panels:

- FLIGHT ASSIST DLH7HV**: A window showing flight details for DLH7HV, including a subject field with "FLIGHT ASSIST for DLH7HV" and a "SEND" button at the bottom right.
- Priority Flight List**: A modal window for managing flight priorities. It features filters for "Today", "Tomorrow", and "Clear". The "Start" and "End" fields are set to "dd/mm/yyyy". Below these are columns for "ARC ID*", "EOBT*", "ADEP", "ADES", and "Reasons". A "CREATE" button is located at the bottom right of this window.
- Flight List**: A table listing various flights with columns for "ARC ID", "EOBT", "ADEP", "ADES", and "Reasons". The table includes entries for flights like BAW994G, EGLL, EDDT, and others.
- CTOT REG EVO**: A table showing flight status and timing. It includes columns for "CTOT", "REG", and "EVO". The table lists flights such as YHWST16A, KSAL1A16, and YHWST16A.
- Search and Filter**: A top panel with a search bar and filters for "NONE", "PRIO", "MUAC", and "MUAC MPR". It also includes dropdowns for "ARC ID", "ADEP", and "ADES".
- Map**: A small map showing flight paths and locations.
- Time and Date**: A panel showing the current time (15:07:37) and date (16/11/2018), along with a "MUAC BackOffice" link.

2019 – 3rd Customer Initiative trial – ATMP V2.0

Expand to FABEC/UK/IRL and allow RUAC, KUAC and NATS to join in on ATMP

From e-mail to full B2B service

Compute and display flight 'Criticality'
Add AO schedule information

**No Certainties
but willing to
improve the
concept**

Allow failure

**Capitalize and
grow** **More AOs**

**Abort if results
not OK or
unforeseen
issues**

**Joined and more reactive improvements, less workload
for NMOC, and improved flight business value**

Results

CI-17:

200 improvements

Can we out-perform nominal
constrained network
performance?

YES

CI-18:

>5000 improvements

Can we deliver a significantly
sizeable quantity and focus
on delay impact?

YES

Workload at NMOC and
overall efficiency

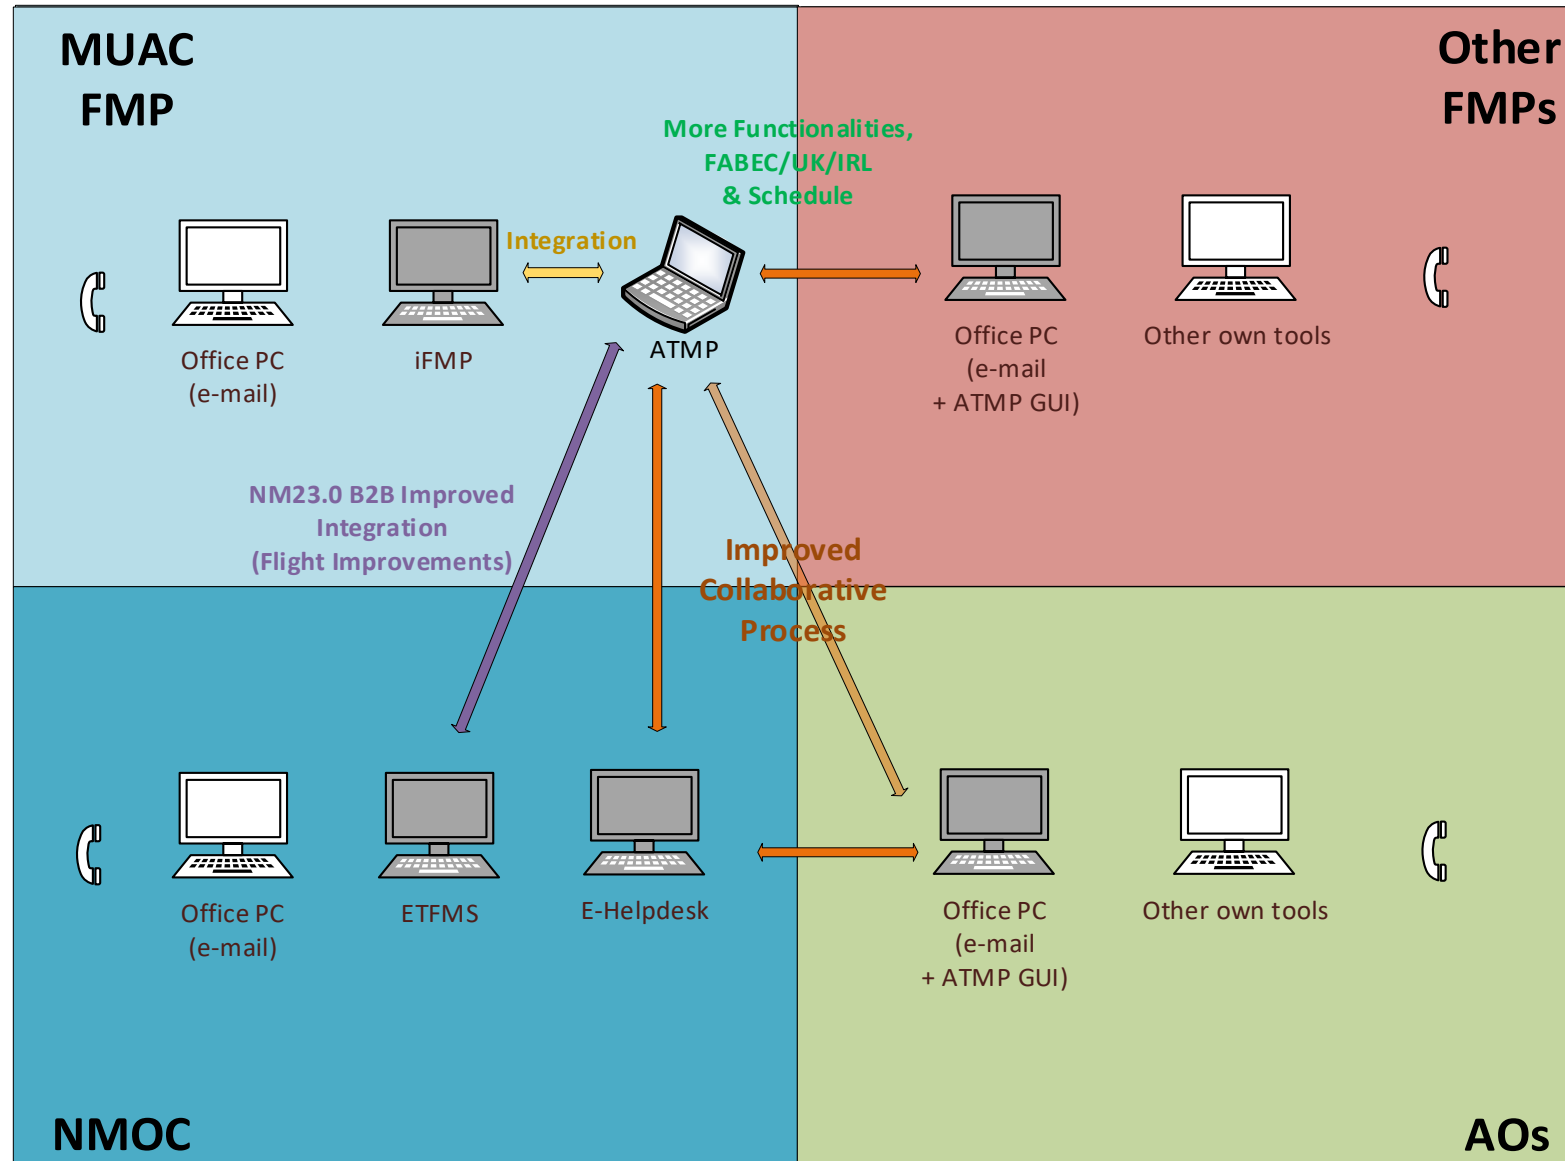

CI-19:

Less flight improvements
(less opportunity), but better
focused on high impact and
more achieved

Can we make the process
more efficient and more
effective?

YES

What's next

QUESTIONS?

THANKS

PJ24 for getting us to develop and trial the NM B2B services together with NM.

Achievement: a good first version, with further improvements possible

PJ9 for getting us good conceptual direction

Achievement: consistency towards future full size application

SWIM: enabling modular technical interoperability, supporting reliable, secure and efficient exchange of information

ENG: for the support and the necessary B2B improvements

OPS: for their support and deployment of new processes

For facilitating our understanding of their operations, as well as their support and engagement in the trial
