

# LSSIP 2019 - CROATIA

## LOCAL SINGLE SKY IMPLEMENTATION

Level 1 - Implementation Overview

# FOREWORD

*"We manage a seamless European airspace by linking together the elements of the European air traffic management system. Focusing on performance of the European network, we ensure that flights reach their destination safely, on time, with the least possible impact on environment and in a cost-efficient way".*

With this mission, as Director NM, I must ensure to develop and operate effectively and efficiently the air traffic management network in Europe and beyond, to meet current and future airspace and ground capacity needs, in full partnership with all operational stakeholders.

In particular, one of the NM activities through the Infrastructure Division, is to focus on the planning and monitoring of the European ATM implementation of the SES objectives at the local level according to EU legislation.

For more than 26 years, the Local Single Sky ImPlementation (LSSIP) documents are expressing yearly the commitment of civil and military national organisations (Regulators and National Supervisory Authorities), Air Navigation Service Providers and Airport Operators, towards the implementation of the European ATM Master Plan (Level 3).

These documents provide an extensive and harmonised picture, for the benefit of the ATM community at large, of how all ECAC States as well as States having a Comprehensive Agreement with EUROCONTROL, and stakeholders concerned, are progressing in planning and deploying the mature elements of the European ATM Master Plan and the European aviation policies.

The reliability and quality of the data provided by the national stakeholders is of such a high quality that it allowed, for the fifth consecutive year, for the information in the LSSIP documents to constitute the sole source of information for the development of ICAO's Aviation System Block Upgrades (ASBUs) Implementation Monitoring Report in the ICAO EUR Region. EUROCONTROL undertakes this work, on behalf of ICAO, for all 55 ICAO/EUR States in accordance with the Global Air Navigation Plan (GANP).

In addition, EUROCONTROL is developing efficient practices to avoid unnecessary duplication of reporting. We are cooperating with the SESAR Deployment Manager, the SESAR Joint Undertaking, the European Defence Agency and NATO on optimising the reporting mechanisms for relevant stakeholders by collecting some of the information needed on their behalf through the LSSIP process.

I would like to thank all the stakeholders for their engagement and substantial effort spent in contributing to the production of this LSSIP document. I see this as a proof of commitment to the principles of transparency and partnership, to the benefit of the entire ATM community!

I wish you a good read!

*Jacopo PRISSINOTTI*

*Director NM – Network Manager*

*EUROCONTROL*

# APPROVAL SHEET

The following authorities have approved all parts of the LSSIP Year 2019 document and the signatures confirm the correctness of the reported information and reflect the commitment to implement the actions laid down in the European ATM Master Plan Level 3 (Implementation View) – Edition 2019.

Stakeholder / Organisation	Name	Position	Signature and date
Ministry of the Sea, Transport and Infrastructure	Tomislav Mihotić	State Secretary	
Croatian Civil Aviation Agency	Marin Puh	Director	
Croatia Control Ltd.	Vlado Bagarić	Director General	
Air, Maritime and Railway Traffic Accident Investigation Agency	Danko Petrin	Acting Director	 19.03.2020
Military Aviation and Maritime Authority	Col Saša Crnec	Head of MAMA – Military Aviation and Maritime Authority	 17.03.2020
Zagreb International Airport Jsc.	Hüseyin Bahadır Bedir	CEO

# Executive Summary

## National ATM Context

Member State of:

The Ministry of the Sea, Transport and Infrastructure (hereinafter referred to as: the Ministry) is competent, among other activities prescribed in the Air Traffic Act, for the overall civil aviation policy of the Republic of Croatia, establishment of a national strategy on aviation development, ensuring the proper implementation of international aviation agreements concluded by the Republic of Croatia, adoption of secondary legislation as set out in this Act and the international agreements binding on the Republic of Croatia and preparation of draft proposals for laws in the field of civil aviation.

In international relations, organizational unit competent for civil aviation within the Ministry shall have, as the "Directorate General for Civil Aviation, Electronic Communications and Post (hereinafter referred to as: the DGCA), the competences in civil aviation as delegated by the minister competent for civil aviation (hereinafter referred to as: the Minister); provided, however, that the Minister shall remain overall responsible for ensuring the lawful exercise of those competences.

The Croatian Civil Aviation Agency (hereinafter referred to as: the CCAA) has been established and works separately from the Ministry of the Sea, Transport and Infrastructure. The CCAA is a fully independent body set up in June 2009 in accordance with the provisions set out in the Air Traffic Act which was published in the Official Gazette issue no. 69/09, 17 June 2009 (and amended since, Official Gazette issue no. 84/11, and also OG 54/13 and 127/13 and 92/14). The Functions of National Supervisory Authority (NSA), in accordance with Regulation (EC). No. 549/2004 are performed by the CCAA which is responsible for oversight of ANSPs and drafting of regulations in ATM fields, when so prescribed by the EU law or if the subject matter is within the competence of member states.

Military Aviation Authority of Croatia was established in 2007 to regulate Military Aviation (MIL OAT Rules, MIL Aircraft Certification, MIL Air crew and maintenance licensing and MIL Aerodromes – Helipads certification. In Croatia, the military aviation is located on combined – civil/military airports (Zagreb, Pula, and Zadar).

The Air, Maritime and Railway Traffic Accident Investigation Agency is functionally and organizationally independent from all other Croatian aviation entities and from all natural and legal persons possibly having a conflict of interests. The Agency has been established by the Law on the establishment of the Air, Maritime and Railway Traffic Accident Investigation Agency (Official Gazette, issue no. 54/13) and has been registered as a legal person into the court register.

Croatia Control Ltd is an independent limited liability company established by the Republic of Croatia. The Republic of Croatia is also the sole owner of the company. The primary mission of Croatia Control Ltd. is provision of air navigation services, pursuing the basic principle of a high level of air traffic safety. Croatia Control Ltd. has been certified as an air navigation services provider, which complies with the Common Requirements for the following services: ATS, CNS, AIS, and MET. Pursuant to the certification process performed by the DGCA a certificate has been issued to Croatia Control Ltd. on 31 March 2009 by the DGCA. Croatia Control Ltd. is the designated provider of ATS and MET services in FIR Zagreb.

Airport authorities are limited liability companies functionally and organizationally independent from civil aviation authorities. There is no centralised management on all airports in Croatia. Major airports are owned by the Republic of Croatia (majority owner, 55% stake) and municipal authorities (counties and cities). Franjo Tuđman Airport in Zagreb is the main national airport and was awarded to the consortium in a 30-year concession. It is also the biggest and main international airport in the country whose traffic activity is predominantly based on scheduled traffic (apart from coastal airports whose main activities are based on seasonal summer charter traffic). Other international airports in Croatia are Split, Dubrovnik, Pula, Rijeka, Zadar, Osijek, Brač and Mali Lošinj. At these Airports, ATC service provision (TWR and APP) is provided by Croatia Control Ltd.

Main national stakeholders:

- The Directorate General of Civil Aviation, Electronic Communications and Postal Service of the Ministry of the Sea, Transport and Infrastructure and called DGCA in the document;
- The Croatian Civil Aviation Agency (hereinafter referred to as CCAA);
- Croatia Control Ltd. (hereinafter referred to as CCL);
- Air, Maritime and Railway Traffic Accident Investigation Agency (hereinafter referred to as AIA);
- The Ministry of Defence (hereinafter referred to as MoD).

Main airport covered by LSSIP: **Franjo Tuđman Airport** (LDZA) in Zagreb

## Traffic and Capacity

Summer Forecast (May to October inclusive)

Minute, Per ACC

Croatia is part of:

The FAB CE – FAB Central Europe

Number of national projects: 8

Number of FAB projects: 2

Number of multinational projects: 1

## Progress per SESAR Phase

The figure below shows the progress made so far in the implementation of the SESAR baseline (Pre-SESAR and SESAR1 non-PCP) and the PCP elements.

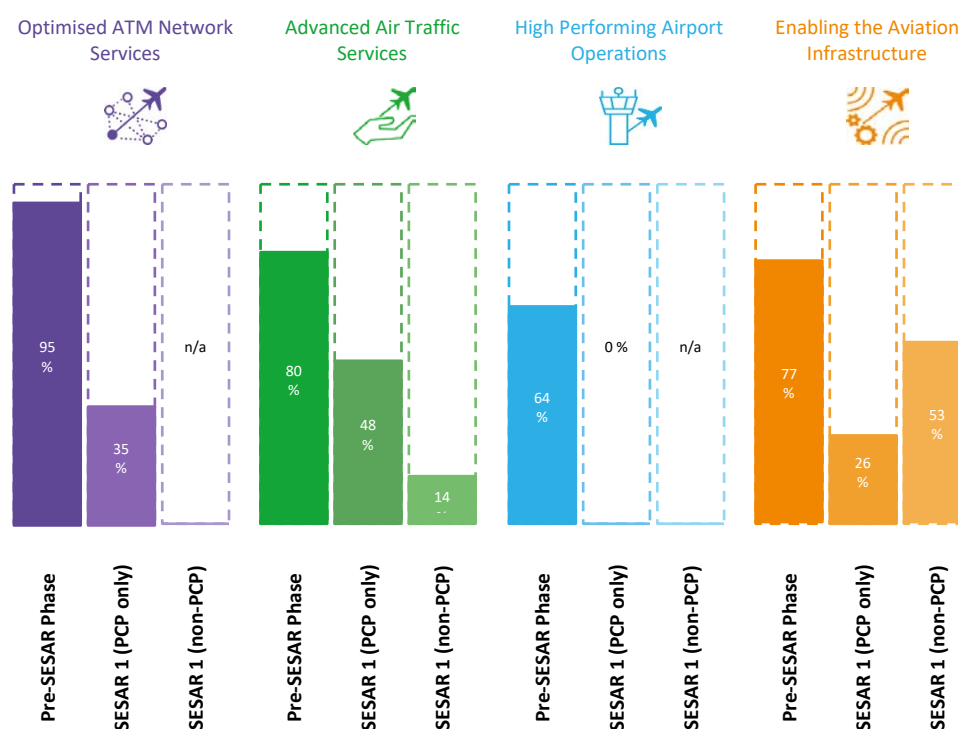

It shows the average implementation progress for all objectives grouped by SESAR Phases, excluding those for which the State is outside the applicability area as defined on a yearly basis in the European ATM Master Plan (Level 3) 2019, i.e. disregarding the declared “NOT APPLICABLE” LSSIP progress status.

The SESAR 1 (non-PCP) progress in the graphics below for this State is based on the following objectives: ATC02.9, ATC19, ATC20, COM11.2 and NAV12.

## Progress per SESAR Key Feature and Phase

The figure below shows the progress made so far, per SESAR Key Feature, in the implementation of the SESAR baseline and the PCP elements. The percentages are calculated as an average, per Key Feature, of the same objectives as in the previous paragraph.

# ICAO ASBUs Progress Implementation

The figure below shows the progress made so far in the implementation of the ICAO ASBUs Block 0. The overall percentage is calculated as an average of the relevant Objectives contributing to each of the relevant ASBUs; this is a summary of the table explained in Chapter 5.3 – ICAO ASBU Implementation Progress.

## ATM Deployment Outlook

### State Objectives

Deployed in 2018 - 2019

- Migrate from AFTN to AMHS

COM10 - 100 % progress

- Aircraft Identification

ITY-ACID - 100 % progress

# Introduction

The Local Single Sky IMpLementation (LSSIP) documents, as an integral part of the Master Plan (MP) Level 3 (L3)/LSSIP mechanism, constitute a short/medium term implementation plan containing ECAC States' actions to achieve the Implementation Objectives as set out by the MP Level 3 and to improve the performance of their national ATM System. This LSSIP document describes the situation in the State at the end of December 2019, together with plans for the next years.

**Chapter 1** provides an overview of the ATM institutional arrangements within the State, the membership of the State in various international organisations, the organisational structure of the main ATM players - civil and military - and their responsibilities under the national legislation. In addition, it gives an overview of the Airspace Organisation and Classification, the ATC Units and the ATM systems operated by the main ANSP;

**Chapter 2** provides a comprehensive picture of the situation of Air Traffic, Capacity and ATFM Delay per each ACC in the State. It shows the evolution of Air Traffic and Delay in the last five years and the forecast for the next five years. It also presents the achieved performance in terms of delay during the summer season period and the planned projects assumed to offer the required capacity which will match the foreseen traffic increase and keep the delay at the agreed performance level;

**Chapter 3** provides the main Implementation Projects (at national, FAB and multinational level) which contribute directly to the implementation of the MP Operational Improvements and/or Enablers and Implementation Objectives. The Level 1 document covers a high-level list of the projects showing the applicable links. All other details like description, timescale, progress made and expected contribution to the ATM Key Performance Areas provided by the State per each project are available in the Level 2 document;

**Chapter 4** deals with other cooperation activities beyond Implementation Projects. It provides an overview of the FAB cooperation, as well as all other multinational initiatives, which are out of the FAB scope. The content of this chapter generally is developed and agreed in close cooperation between the States concerned;

**Chapter 5** contains aggregated information at State level covering the overall level of implementation, implementation per SESAR Key Feature and implementation of ICAO ASBUs. In addition, it provides the high-level information on progress and plans of each Implementation Objective. The information for each Implementation Objective is presented in boxes giving a summary of the progress and plans of implementation for each Stakeholder. The conventions used are presented at the beginning of the section.

*The Level 1 document is completed with a separate document called LSSIP Level 2. This document consists of a set of tables organised in line with the list of Implementation Objectives. Each table contains all the actions planned by the four national stakeholders (REG, ASP, MIL and APO) to achieve their respective Stakeholder Lines of Action (SLoAs) as established in the European ATM Master Plan L3 Implementation Plan Edition 2019. In addition, it covers a detailed description of the Implementation Projects for the State as extracted from the LSSIP Data Base.*

*The information contained in Chapter 5 – Implementation Objectives Progress is deemed sufficient to satisfy State reporting requirements towards ICAO in relation to ASBU (Aviation System Block Upgrades) monitoring.*

# 1. National ATM Environment

## 1.1. Geographical Scope

### International Membership

Croatia is a Member of the following international organisations in the field of ATM:

Organisation		Since
ECAC	✓	July 1992
EUROCONTROL	✓	April 1997
European Union	✓	July 2013
EASA	✓	Full member
ICAO	✓	May 1992
NATO	✓	April 4, 2009
ITU	✓	June 3, 1992
EDA	✓	July 2013

### Geographical description of the FIR(s)

Zagreb ACC has been delegated for ATS provision for:

- En-route traffic inside the Zagreb FIR (Fig. 1)
- En-route traffic inside the western part of the FIR Sarajevo above 9500 ft MSL, as depicted on the LOWER map, below, (see Figure 2)
- the En-route traffic inside the western part of FIR Sarajevo from FL 325 up to FL 660 as on the UPPER airspace map below (see Figure 2).

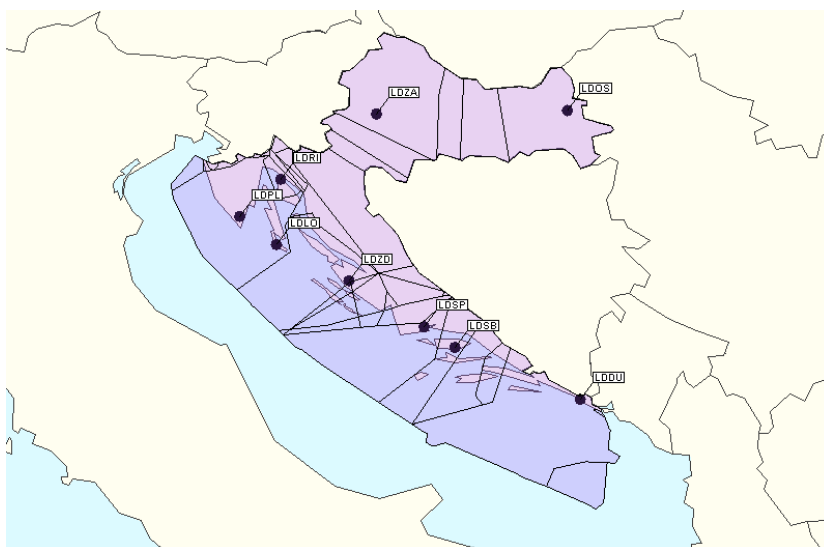

Figure 1 Zagreb FIR

The geographical scope of this document addresses the Croatia FIR Zagreb and a part of FIR Sarajevo where the ATS service provision is still delegated to CCL (see Figure 1.)

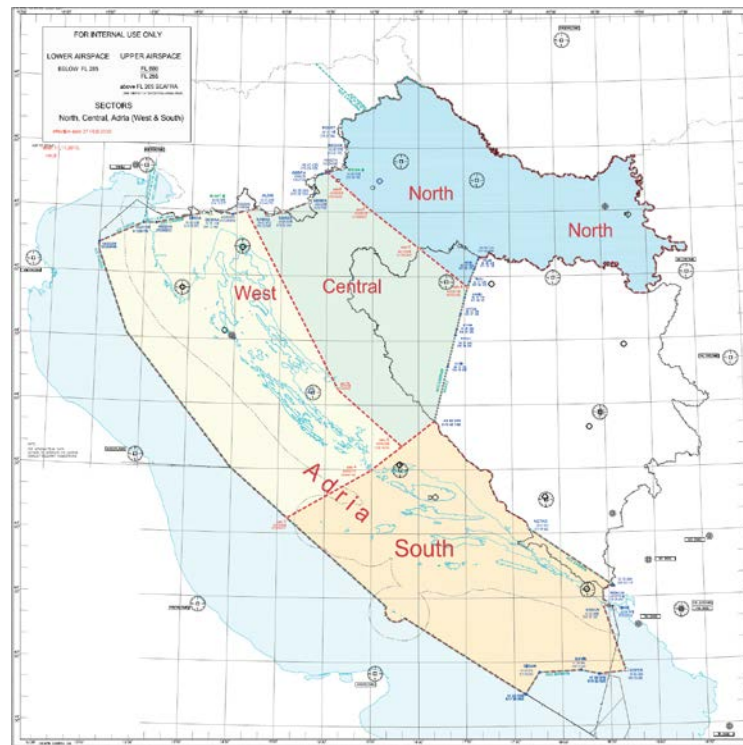

Figure 2 CCL AoR

Zagreb FIR is surrounded by FIRs of 7 States, Hungary (Budapest FIR), Slovenia (Ljubljana FIR and Wien ACC within delegated MURA sector), Italy (Padova and Brindisi), Bosnia and Herzegovina (Sarajevo FIR), Serbia (Belgrade FIR) and Montenegro (Belgrade FIR).

## Airspace Classification and Organisation

### 1. Airspace class C applied to:

- Zagreb CTA from FL 115 to FL 660
- Within the lateral limits of Zagreb TMA between 1000 ft AGL and FL 205
- Within the lateral limits of Pula, Zadar, Split and Dubrovnik TMA between 7500 ft MSL and FL135/FL155/FL 205

### 2. Airspace class D applied to:

- CTA Zagreb between FL 115 and 1000 ft AGL
- Osijek and portion of Zagreb TMA's from 1000 ft AGL up to FL115
- Pula, Dubrovnik, Rijeka and Zadar TMA's within their lateral and boundaries from 1000 ft AGL up to 7500 ft MSL
- All Croatian CTRs within their lateral and vertical boundaries

3. Airspace class G applied with lateral limits of Zagreb FIR with exemption of CTRs, from GND to 1000 ft AGL.

Metric system is not used, only imperial system is available in accordance with national regulations.

The Division Flight Level (DFL) separating upper from lower ATS airspace is FL 285.

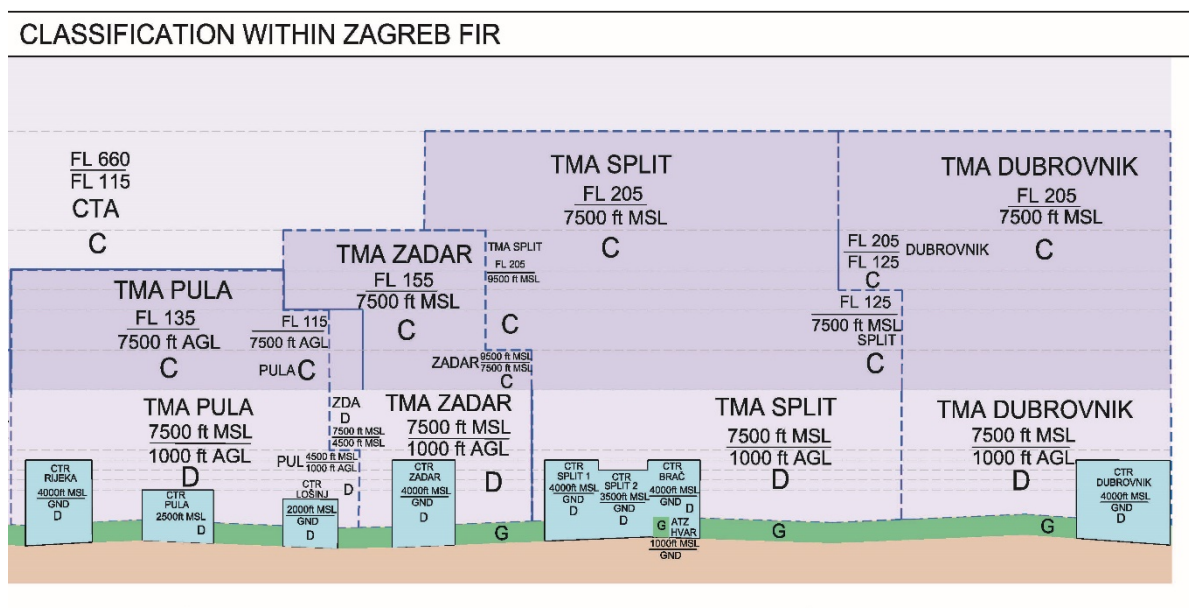

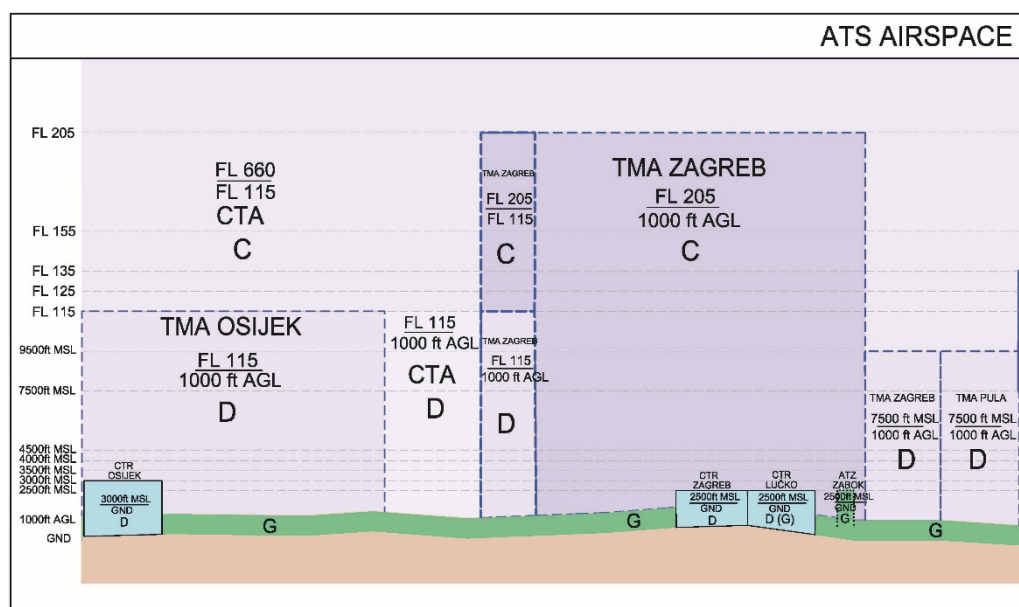

Figure 3 ATS Airspace classification within FIR Zagreb

#### SEAFRA h24

Since December 2016, cross-border Free-route Airspace (FRA) procedures are available H24 from FL325 up to FL660 in the airspace formed from airspaces of Zagreb FIR/UIR, Sarajevo UIR and Belgrade FIR.

## SECSI FRA

South East Common Sky Initiative (SECSI) is crossborder free route airspace initiative covering the airspace of Austria, Slovenia, Croatia, Bosnia and Herzegovina, Montenegro, and Serbia.

SECSI FRA encompasses the area of former SAXFRA and SEAFRA, forming one cross-border free route airspace from 01 February 2018 and is available h24 daily.

The part covering former SAXFRA remains vertically unchanged, with FRA operations starting above the lowest available level (LAL).

The part covering former SEAFRA has a lower FRA operations level change from FL325 to FL205.

Both parts are laterally merged into one cross border FRA without compulsory intermediate points except as described in RAD.

## ATC Units

The ATC units in the Croatian airspace, which are of concern to this LSSIP, are the following:

ATC Unit	Number of sectors		Associated FIR(s)	Remarks
	En-route	TMA		
Zagreb ACC	<b>9/10</b>	1	Zagreb FIR and part of Sarajevo FIR	Serving CIV and MIL tfc.
Dubrovnik		1		Serving CIV and MIL tfc.
Osijek		1		Serving CIV and MIL tfc.
Pula		1		Serving CIV and MIL tfc.
Rijeka		1		Serving CIV and MIL tfc.
Split		1		Serving CIV and MIL tfc.
Zadar		1		Serving CIV and MIL tfc.

## U-Space services

An overview of the current implementation progress and short to medium term planning information on the main elements underlying the provision of the U-Space services enabling Very Low Level drones operations is provided in Annex to this document.

The following table contains a list of the 16 services expected to be available in phases U1 (2019) to U3 (2025), as described in the European ATM Master Plan add-on: Roadmap for the safe integration of drones into all classes of airspace.

Phase		Service	
U1	Foundation Services	U1.1	e-Registration
		U1.2	e-Identification
		U1.3	Pre-tactical Geo-fencing
U2	Initial Services	U2.1	Tactical Geo-fencing
		U2.2	Flight Planning Management
		U2.3	Weather Information
		U2.4	Tracking

Phase		Service
	U2.5	Monitoring
	U2.6	Drone Aeronautical Information Management
	U2.7	Procedural Interface with ATC
	U2.8	Emergency Management
	U2.9	Strategic De-confliction
U3    Advanced Services	U3.1	Dynamic Geo-fencing
	U3.2	Collaborative Interface with ATC
	U3.3	Tactical De-confliction
	U3.4	Dynamic Capacity Management

## 1.2. National Stakeholders

The main National Stakeholders involved in ATM in Croatia are the following:

- The Directorate General of Civil Aviation, Electronic Communications and Postal Service of the Ministry of the Sea, Transport and Infrastructure and called DGCA in the document;
- The Croatian Civil Aviation Agency (CCAA);
- Croatia Control Ltd. (hereinafter referred to as the CCL);
- Air, Maritime and Railway Traffic Accident Investigation Agency (hereinafter referred to as the AIA);
- The Ministry of Defence (hereinafter referred to as the MoD).

Other main National Stakeholders in Croatia are the largest Croatian airports. They are owned by the Republic of Croatia (majority owner, 55% stake) and municipal authorities (45% stake is divided between counties, cities and municipalities, as applicable). Zagreb Franjo Tuđman Airport was awarded to the consortium in a 30-year concession.

Their activities are detailed in the following subchapters and their relationships are shown in the Annexes.

## Civil Regulator(s)

### General Information

The competent bodies for civil aviation in Croatia are:

- a) The Ministry of the Sea, Transport and Infrastructure (MSTI);
- b) The Croatian Civil Aviation Agency (CCAA);
- c) Air, Maritime and Railway Traffic Accident Investigation Agency (AIA).

Different national entities having regulatory responsibilities in ATM are summarised in the table below. The responsibility of each Stakeholder is further detailed in the following sections.

Activity in ATM:	Organisation responsible	Legal Basis
Rule-making	MSTI CCAA	Air Traffic Act
Safety Oversight	CCAA	Air Traffic Act
Enforcement actions in case of non-compliance with safety regulatory requirements	CCAA	Air Traffic Act
Airspace	National Airspace Management Committee MSTI Ministry of Defence	Air Traffic Act
Economic	CCAA	Air Traffic Act Ordinance on conditions and manner of issuing the Air navigation service provider certificate
Environment	Ministry of environment and energy Croatian Environment Agency CCAA	Environment Protection Act Air Traffic Act
Security	National Civil Aviation Security Committee	Air Traffic Act National Civil Aviation Security Programme National Civil Aviation Security Quality Programme
Accident investigation	Air, Maritime and Railway Traffic Accident Investigation Agency	Air Traffic Act Act on the establishment of the Air, Maritime and Railway Traffic Accident Investigation Agency

a) For Rulemaking the competent authorities are MSTI and CCAA, according to Air Traffic Act. MSTI is responsible for the adoption of secondary legislation and for preparation of draft proposals for laws in the field of civil aviation. CCAA is responsible for preparation of draft proposals for secondary legislation relating to its activities, adopted by the Minister on the basis of the Air Traffic Act, and for issuing binding air safety orders to implement its competencies established by the Act and the regulations adopted on the basis of the Act.

b) For Establishment of Acceptable Safety Levels the competent authorities are the Government of the Republic of Croatia and the Aviation Safety Committee. The Government of the Republic of Croatia, with the aim of achieving an acceptable level of safety in the Republic of Croatia, in accordance with the relevant ICAO documents, adopts the State Aviation Safety Programme based on the proposal of the Aviation Safety Management Board.

c) For environment the competent authorities are Ministry of environment and energy and CCAA. Ministry of environment and energy gives consent to proposed draft ordinances on conditions for design, construction, and marking of airports, on construction and placement of barriers at airport area, on maximum allowed levels of emission during aircraft take-off and landing, on conditions and methods for establishing noise protection areas and construction conditions in those areas. CCAA is responsible for execution of its duties stemming from ordinances, mostly relating to oversight of entities covered by those ordinances and imposing administrative sanctions in case of found non-compliances.

## Ministry of the Sea, Transport and Infrastructure (DGCA Croatia)

The Ministry of the Sea, Transport and Infrastructure is competent, among other activities prescribed in the Air Traffic Act, for the overall civil aviation policy of the Republic of Croatia, establishment and development of a national strategy on aviation, ensuring the proper implementation of international aviation agreements concluded by the Republic of Croatia, adoption of secondary legislation as set out in this Act and the international agreements binding on the Republic of Croatia and preparation of draft proposals for laws in the field of civil aviation.

In international relations, organizational unit competent for civil aviation within the Ministry shall have, as "Directorate General for Civil Aviation, Electronic Communications and Postal Services (DGCA)", the competences in civil aviation as delegated by the minister competent for civil aviation; provided, however, that the Minister shall remain overall responsible for ensuring the lawful exercise of those competences.

Organisation of the Directorate General of Civil Aviation, Electronic Communications and Postal Services:

The Directorate General of Civil Aviation, Electronic Communications and Post is a public service of the MSTI, organized as an internal administrative organization of the Ministry. It is managed by the Assistant Minister/Director General.

The Act on the State Administration System ("Official Gazette", issue no. 150/11, 12/13, 93/16 and 104/16) (Zakon o sustavu državne uprave) sets down the state administration responsibilities as follows: direct implementation of acts, establishment of rules for acts implementation, conducting of administration surveillance as well as other administration and professional responsibilities and Government Decision: Regulation Concerning the Internal Structure of the MSTI ("Official Gazette" issue no. 27/12, 36/12, 79/13 and 65/15, 76/17 and 116/17) (Uredba o unutarnjem ustrojstvu Ministarstva pomorstva, prometa i infrastrukture).

With this regulation the internal structure of the MSTI, the names of administrative organizations that are part of the Ministry and the names of internal structural units as well as their domain, the administrative methods, approximate number of administrative officials and employees have all been established.

The Ministry is in particular competent for the following activities in the field of civil aviation:

1. the overall civil aviation policy of the Republic of Croatia;
2. establishment of a national strategy on aviation development;
3. representation of the Republic of Croatia at international civil aviation organisations and organizations in the framework of the ECAA Agreement;
4. conclusion of bilateral and multilateral aviation agreements (preparation, negotiation, signature...);
5. to ensure the proper implementation of international aviation agreements concluded by Croatia;
6. matters relating to the establishment and operation of scheduled air services ensuing from bilateral and multilateral aviation agreements;
7. the adoption of secondary legislation as set out in the Air Traffic Act and the international agreements binding on the Republic of Croatia;
8. to prepare draft proposals for laws in the field of civil aviation;
9. to perform administrative monitoring of the Agency and Agency for investigation;
10. high level decisions on Air Navigation matters except safety;
11. to conduct proceedings on concession arrangements for aerodromes in accordance with the Act on Concessions and international agreements binding on the Republic of Croatia;
12. to decide on the status of the airports and to appoint if necessary the independent slot allocation coordinator;
13. performing proceedings on offences determined by the Air Traffic Act;
14. other activities as prescribed in the Air Traffic Act.

Further to the institutional separation, the DGCA at the Ministry continues to carry out 3 functions:

1. Legal affairs
2. International affairs
3. Economic regulation

An organisation chart representing all DGCA's sectors in the Annexes of this document.

## National Committees

The Air Traffic Act ("Official Gazette" issue no. 69/09, 84/11, 54/13, 127/13 and 92/14) provides for the establishment of four different National Committees:

- National Aviation Security Committee;
- National Airspace Management Committee;
- Aviation Safety Committee;
- National Facilitation Committee.

The Ministry's site: <http://www.mmpi.hr>

Annual Report published:	<a href="https://mmpi.gov.hr/">https://mmpi.gov.hr/</a>
--------------------------	---

## Croatian Civil Aviation Agency (CCAA)

Croatian Civil Aviation Agency (hereinafter: CCAA) has been established in 2009 and works separately and independently from the Ministry of Transport.

The CCAA is a fully independent body with public authority set up in June 2009 in accordance with the Air Traffic Act (OG 69/09, 84/11, 54/13, 127/13, 92/14).

The CCAA is in particular responsible for:

- preparation of draft proposals for secondary legislation relating to the Agency's activities, adopted by the Minister on the basis of this Act;
- monitoring of implementation of State Aviation Safety Programme
- certification and issuing licences to air carriers;
- certification of aircraft including the necessary inspections of technical and operational conditions of the aircraft;
- the civil aircraft registry of the Republic of Croatia and any other civil aviation registry;
- licensing and rating of civil aeronautical personnel;
- certification of civil aerodromes;
- collection of data on civil aeronautical personnel and aircraft and its distribution;
- collection, analysis and dissemination of statistics, reports, documents and other data on aviation technology, operation of aircraft, aerodromes and aeronautical personnel to the extent that this is of relevance for performing the functions under this Act;
- oversight of the technical and operational conditions and economic fitness of aviation undertakings of the Republic of Croatia and aviation training facilities;
- oversight of security in civil aviation;
- matters relating to environment protection concerning air traffic;
- oversight and inspection of the air traffic safety as provided for in this Act;
- other functions as stipulated in this Act and regulations adopted on the basis of this Act.

The same provision of the Air Traffic Act also states that CCAA acts as a National Supervisory Authority, to which end a separate entity has been established within CCAA.

The Statute describes role and responsibilities of the CCAA as well as the important provisions for its governance and management.

The remit of the NSA is in line with applicable provisions of EU acquis.

CCAA Board is the high-level governing body of the CCAA. It consists of 5 independent and recognized, competent officials with various backgrounds.

CCAA reports directly to the Government of Croatia - primarily through its duty to provide the Annual Report.

Within the scope of its activities the Agency, and in close cooperation with the Ministry, CCAA participates in international activities, including the negotiation processes leading to the conclusion of international air service agreements, meetings in International Civil Aviation Organisation (ICAO) and other international organisations and institutions in civil aviation, and participates in the working of their professional bodies and working groups, and co-operates with international bodies responsible for civil air transport.

The set-up of the CCAA was done in a seamless transition with very limited impact on the DGCA/NSA business.

The Agency is a legal entity with public authority having its headquarters in Zagreb. The Republic of Croatia is the founder of the Agency. By public authority, the Agency carries out the activities laid down in the Air Traffic Act as activities in the interest of the Republic of Croatia.

The Agency is autonomous in the performance of activities within its competence and is responsible to the Government.

Remarks on Safety Oversight - The Air Traffic Law (OG 69/09, 84/11, 54/13, 127/13, 92/14) in the Articles 5 - Competences of Civil Aviation Agency reads:

“The CCAA is acting as the National Supervisory Authority (NSA), and performs tasks assigned under the relevant EU acquis. These tasks include establishment and oversight of Performance plan in accordance with Single European Sky regulations, the certification of air navigation service providers, the continuing oversight of the provision of air navigation services with the purpose of ensuring continuing compliance with the common requirements, as well as for other matters in accordance with the regulations adopted on the basis of this Act and relevant EU acquis. The Republic of Croatia shall notify the European Commission the name and address of the NSA, as well as changes thereto, and of the measures taken to ensure compliance with paragraph 9 of this Article”.

Article 96. of the Air Traffic Act:

(1) “Air navigation services shall be provided within flight information region of the Republic of Croatia in accordance with the provisions of this Act, regulations adopted on the basis on this Act and in accordance with relevant EU acquis subject to the conditions and modalities set out in the international agreements binding on the Republic of Croatia.”

(5) To a legal person submitting evidence of compliance with the requirements referred to in paragraph 1 of this Article the Agency shall issue an Air Navigation Service Provider Certificate.

(6) For the provision of certain air navigation services the Ministry shall, with consent from the minister competent for defence, designate an air navigation service provider, in accordance with the regulation from paragraph 7. of this Article.

(7) The requirements and procedure for the issuing of an Air Navigation Service Provider Certificate and the designation of an air navigation service provider shall be performed according to a regulation adopted on the basis of this Act and in accordance with relevant EU acquis.

(8) A certified air navigation service provider shall at any time comply with the applicable common requirements or with the conditions attached to the Certificate and shall notify the Agency on planned changes to its provision of air navigation services, which can influence compliance with the applicable common requirements or with the conditions attached to the Certificate.

(9) If it is ascertained that certified air navigation service provider no longer complies with the applicable common requirements or with the conditions attached to the Certificate, the Agency shall request that air navigation service provider takes corrective measures, set the deadline for their implementation, monitor implementation and take necessary measures if needed, in a way determined by a regulation adopted on the basis of this Act in accordance with relevant EU acquis.

(10) A statutory fee shall be paid for the auditing process to confirm compliance with the requirements for the issuing of an Air Navigation Service Provider Certificate and for the continuing oversight over the service provider concerned to ensure continuous compliance with these requirements.

According with the Letter ref 303-03/08-01/484 and 530-09/08-01 dated 17.11.2008, the Ministry of the Sea, Transport and Infrastructure was nominated as the Croatian NSA (i.e. Civil Aviation Authority and Civil Aviation Inspection Department).

According to Article 5 of Air Traffic Act (OG 69/09, 84/11, 54/13, 127/13), on 10th April 2009, with Letter 303-03/08-01/484 and 530-09/09-04, the Republic of Croatia has notified the European Commission the name and address of the NSA. Croatian NSA is Croatian Civil Aviation Agency (CCAA).

According to the Article 96(6), Ordinance on the conditions and means of providing air navigation services (OG 81/08 and OG 115/09-2, now OG 49/13) was issued. Based on this Ordinance, the NSA issued a certificate to Croatia Control Ltd. on 31st March 2009 for ATS, CNS, MET and AIS services.

The requirements of EC Commission Regulation (EU) 1034/2011 on the subject of Safety Directives have been transposed through Ordinance on the conditions and means of providing air navigation services (OG 81/08 and OG 138/2009, now OG 49/13).

NSA (CCAA) is continuously making oversight of certified service provider according to ANS Oversight Programme.

Annual Report published:	Y	<a href="http://www.ccaa.hr/download/documents/read/godisnje-izvjesce-o-radu-hrvatske-agencije-za-civilno-zrakoplovstvo-za-2018- 4163">http://www.ccaa.hr/download/documents/read/godisnje-izvjesce-o-radu-hrvatske-agencije-za-civilno-zrakoplovstvo-za-2018- 4163</a>
--------------------------	---	---

## Air, Maritime and Railway Traffic Accident Investigation Agency (AIA)

Air, Maritime and Railway Traffic Accident Investigation Agency (hereinafter referred as: AIA) on the basis of public authority, as activities of interest for the Republic of Croatia conducts:

- investigation of aircraft accident and serious incidents,
- investigation of maritime accidents and incidents,
- investigation of serious accidents and incidents in railway traffic.

In the framework of activities, the AIA performs the following tasks:

1. Investigates aircraft accidents, serious incidents and occurrences;
2. Gives safety recommendations to improve air traffic safety;
3. Manages the National database;
4. Submits data on occurrences from the National database to the European Commission Central Database;
5. Exchanges data from its National Database with other investigative bodies under the condition of data confidentiality;
6. Provides expert assistance to competent investigative bodies of the Republic of Croatia;
7. Cooperates with other aircraft accident investigation bodies members of the International Civil Aviation Organization (ICAO);
8. Publishes the results of the investigation while respecting the principles of confidentiality;
9. Creates a list of experts for investigation of aircraft accidents.

## Technical Investigation

The AIA conducts investigations for Civil Aviation aircraft accidents and serious incidents, whereas an occurrence shall be investigated by the AIA if it should assess that the investigation would result in lessons for air traffic safety. AIA is functionally and organisationally independent from all other Croatian aviation entities and from all natural and legal persons possibly having a conflict of interests.

AIA web site: [www.ain.hr](http://www.ain.hr)

## Collection, Evaluation & Processing of Data

The AIA is competent for management and regular updating of National Database on aircraft occurrences, accidents and serious incidents and for exchange and passing of data incorporated in it. In order to carry out this function, AIA established ECCAIRS tools. Data from the National database are submitted to the European Commission Joint Research Center.

## Civil-Military Accidents/Incidents

If the accident or serious incident involve civil and military aircraft, the investigation of accident or serious incident are carried out by AIA with the participation of representatives of the MoD appointed by the minister of defence.

## Croatia Control Ltd. (CCL), Croatian Air Navigation Service Provider

### Services provided

Governance:	Independent Business entity		Ownership:	State owned
Services provided	Y/N	Comment

ATC approach	Y			
ATC Aerodrome(s)	Y			
AIS	Y			
CNS	Y			
MET	Y			
ATCO training	Y			
Others	Y	CCL is responsible for service provision to Military flights		
Additional information:				
Provision of services in other State(s):	Y	Bosnia and Herzegovina		
Annual Report published:	Y	<a href="https://www.crocontrol.hr/UserDocsImages/OSJ/Publikacije/CCL_Annual_Report_2018.pdf">https://www.crocontrol.hr/UserDocsImages/OSJ/Publikacije/CCL_Annual_Report_2018.pdf</a>		

Croatia Control Ltd web site: <http://www.crocontrol.hr>

CCL organisational chart is given in Annexes.

## ATC systems in use

Main ANSP part of any technology alliance <sup>1</sup>	Y	COOPANS
--	---	---------

### FDPS

Specify the manufacturer of the ATC system currently in use:	Thales TopSky ATM for Main ATM system (CroATMS_C)
Upgrade <sup>2</sup> of the ATC system is performed or planned?	Yearly at Q1
Replacement of the ATC system by the new one is planned?	Yes
ATC Unit	Co-flight or similar, after 2023

### SDPS

Specify the manufacturer of the ATC system currently in use:	EUROCONTROL ARTAS
Upgrade of the ATC system is performed or planned?	regularly
Replacement of the ATC system by the new one is planned?	no
ATC Unit	EUROCONTROL ARTAS

The main ATM system is being developed through COOPANS (COOPERation between ANS providers) partnership together with Austrocontrol, IAA, LFV, Naviar and NAV Portugal. With unified ATM system in 6 ANSPs, COOPANS members are significantly optimizing life cycle cost through harmonization of functions and procedures and with a joint investment. Service provision is secured by main and back-up ATM system (ARES). In case of main and back-up ATM system failure, completely independent emergency ATM system (SkyPad) is used for “clear the sky” procedures.

Continuous development and upgrade of main and back-up ATM system will cover software functionality and hardware enhancements all that might be required by the regulators and operational requirements to achieve the SES goals, and to further increase safety and capacity.

The VCCS provides CCL with the ability to control and manage all voice communications at the ACC and the airport sites as well as managing the radio equipment offsite. It includes also an emergency/backup solution for the ACC and regional airports (Split, Zadar, Dubrovnik and Pula).

To improve coverage area and increase capacity (number of frequencies) introduction of new radio sites is constantly planned. The upgrade of existing VHF and UHF radio network will be compliant with the Regulation (EU) 1079/2012, and will also enable future seamless migration to VoIP technology. CCL is connected to PENS and X-bone (FAB CE regional IP network) G-G networks. Some modernization will be needed to support Air/Ground Data-Link Service as a means to comply with the Regulation (EC) 29/2009.

Existing ground-based surveillance data system consists of data from one own combined PSR+MSSR Mode-S radar (near Zagreb airport), three own secondary Mode-S radars and three secondary Mode-S radars from Croatian military surveillance system.

Because own infrastructure does not ensure the sufficient level of radar coverage in some volumes some new systems deployment (the new MSSR Mode-S station and TMA ADS-B system) is planned to fully enable at least dual coverage throughout the FIR airspace and better data resolution, enhancing both performance and safety markers. This is compliant with Regulation (EU) 1207/2011.

AMC Croatia became fully operational in April 2014. Tools that are available are Lara and CHMI, and a development of a local real time ASM booking tool available to all stakeholders on a dedicated live AMC Portal.

<sup>1</sup> Technology alliance is an alliance with another service provider for joint procurement of technology from a particular supplier (e.g. COOPANS alliance)

<sup>2</sup> Upgrade is defined as any modification that changes the operational characteristics of the system (SES Framework Regulation 549/2004, Article 2 (40))

ATFCM function is supported 24/7 by Zagreb FMP, equipped to the same common ECAC standards (CHMI and other NM applications). Dynamic Demand-Capacity Balancing tools are being developed at FAB CE level, with STAM Phase 1 implemented among FAB CE states in April 2017.

AIS uses an EAD system, which is aligned with EU regulatory requirements on a regular basis, through a controlled “release” once every year. A local database, which will serve as a connector between the data originators and AIS, is under process of deployment.

A state PBN implementation plan is being developed by a group represented by each stakeholder. PRNAV and RNAV-GNSS procedures are completed for the main airport in Croatia (LDZA), and the others are in the process. All procedures are validated first on the ground, and later through a dedicated flight check. Safety assessments are done for each implementation, and are delivered to the NSA for approval.

## Airports

### General information

Airport authorities are functionally and organizationally independent from civil aviation authorities. There is no centralised management on all airports in Croatia. According to Law on Airports, ownership on airports is shared among state, counties and cities.

#### ***Franjo Tuđman Airport (Zagreb)***

Franjo Tuđman Airport in Zagreb is the main national airport. It is also the biggest and main international airport in the country whose traffic activity is predominantly based on scheduled traffic throughout the year. The airport is managed by the consortium in a 30-year concession.

#### ***Other Airports in the Republic of Croatia***

Other international airports in Croatia are Pula, Split, Dubrovnik, Rijeka, Zadar, Osijek, Brač and Mali Lošinj. At these Airports, ATC service provision (TWR and APP) is provided by CCL.

### Airport(s) covered by the LSSIP

Referring to the List of Airports in the European ATM Master Plan Level 3 Implementation Plan Edition 2019 – Annex 2, it is up to the individual State to decide which additional airports will be reported through LSSIP for those Objectives.

Therefore, the following airports are covered in this LSSIP: **Zagreb, Franjo Tuđman Airport** (LDZA, ZAG).

As stated in the previous section, in Croatia, the military aviation is located on combined – civil/military airports (Zagreb, Pula, and Zadar).

AIRPORT	ICAO Code	IATA Code	IATA Level
Brač	LDSB	BWK	1
Dubrovnik	LDDU	DBV	1 2 summer season
Mali Lošinj	LDLO	LSZ	1
Osijek/KLISA	LDOS	OSI	1
Pula	LDPL	PUY	1
Rijeka	LDRI	RJK	1
Split	LDSP	SPU	1 2 summer season
Zadar	LDZD	ZAD	1 2 summer season
Franjo Tuđman Airport	LDZA	ZAG	1 2 summer season

The list of International Airports in Croatia

Split Airport (LDSP) is declared as IATA Level 2 airport (schedule-facilitated airport) on weekends during the summer months. In 2015, Dubrovnik and Zagreb airports have also declared IATA Level 2 for the summer as the benefits of coordinating airport resources with the users becomes obvious during the busy summer months. In 2019, this also became true for Zadar Airport. Traffic demand on these airports has reached the available airport capacities on weekends, and prior coordination is required for an arrival operation during summer.

## Military Authorities

The regulation (Aviation Act and Rules of the Air) dealing with the military aviation are prepared and agreed with the participation of the Ministry of Defence (MoD).

According to the Law on Defence (Official Gazette, No 37/2002, 76/2007, 75/2015) (Zakon o izmjenama i dopunama zakona o obrani) Minister of Defence is responsible to regulate Military Aviation (MIL OAT Rules, MIL Aircraft Certification, MIL Air crew and maintenance licensing and MIL Aerodromes - Helipads certification).

Military Aviation Authority of Croatia was established in 2007 to implement above mentioned tasks according to the Law on Defence (Official Gazette, No 37/2002, 76/2007, 75/2015) (Zakon o izmjenama i dopunama zakona o obrani) and Government Decision: Regulation Concerning the Internal Structure of the MoD ("Official Gazette" No 2/17) (Uredba o unutarnjem ustrojstvu Ministarstva obrane).

CCL is responsible for the provision of Air Navigation Services in Croatia and for controlling all military flights.

The Flight Safety Department of the Croatian Air Forces supervises the implementation of regulation. General Staff Special Unit acts as UAV operator and Croatian Air Force acts as Aircraft operator and airspace user (tactical: Mig-21, training: Pilatus PC-9, Bell 206, Zlin 242 L and Transport: An-32B, Mi-8 MTV).

ATC, FIS, AIS, MET, COMM and NAV services to military traffic are provided by CCL.

SAR service is provided by Military. Air defence units are responsible for air defence missions within TSA.

In Croatia, the military aviation is located on combined – civil/military airports (Zagreb, Pula, and Zadar).

Their regulatory, service provision and user role in ATM are detailed below.

## Regulatory role

### Regulatory framework and rule-making

OAT		GAT

## User role

IFR inside controlled airspace, Military aircraft can fly?	OAT only		GAT only		Both OAT and GAT	Y
--	----------	--	----------	--	------------------	---

If Military fly OAT-IFR inside controlled airspace, specify the available options:					
Free Routing	N	Within specific corridors only	N		
Within the regular (GAT) national route network	N	Under radar control	Y		
Within a special OAT route system	N	Under radar advisory service	N		

If Military fly GAT-IFR inside controlled airspace, specify existing special arrangements:									
No special arrangements					Exemption from Route Charges				Y
Exemption from flow and capacity (ATFCM) measures				Y	Provision of ATC in UHF				
CNS exemptions:	RVSM	Y	8.33	N	Mode S	N	ACAS	N	
Others:	N/A								

## Flexible Use of Airspace (FUA)

Military in HR applies FUA requirements as specified in the Regulation No 2150/2005:	Y
FUA Level 1 implemented: Y Implemented through a national high-level body for ASM (National Airspace Management Committee)	
FUA Level 2 implemented: Y FUA Level 2 was implemented in April 2014, with the start of operations of AMC Croatia	
FUA Level 3 implemented: Y Tactical coordination between ATCO and MIL exists in practice	

## 2. Traffic and Capacity

### 2.1. Evolution of traffic in Croatia

EUROCONTROL Seven-Year Forecast (Autumn 2019)											
IFR flights yearly growth		2016 A	2017 A	2018 A	2019 F	2020 F	2021 F	2022 F	2023 F	2024 F	2025 F
Croatia	H				11.4%	6.4%	4.9%	4.1%	3.7%	3.8%	3.3%
	B	0.9%	8.7%	10.2%	11.0%	4.5%	2.8%	2.9%	2.6%	2.7%	2.0%
	L				10.4%	2.4%	0.6%	1.2%	1.1%	1.2%	0.6%
ECAC	B	2.8%	4.0%	3.8%	1.1%	2.3%	1.9%	2.2%	1.8%	1.9%	1.4%

#### 2019

Traffic in Croatia increased by 10.6% in 2019 compared to 2018.

#### 2020-2024

The EUROCONTROL Seven-Year Forecast predicts an average annual increase between 1.2% and 4.3% during the planning cycle, with a baseline growth of 2.9%.

## 2.2. ACC Zagreb

### Traffic and en-route ATFM delays 2015-2024

### Performance summer 2019

Zagreb ACC	Traffic evolution (2019 vs 2018)		En-route Delay (min. per flight)			Capacity (2019 vs 2018)		
	Traffic Forecast		Actual Traffic	All reasons	ACC Reference Value	Planned	Achieved	Capacity gap?
	Current Routes	Shortest Routes						
Year	H: 5.8%	+13%	+11.0%	0.94	0.24			
Summer	B: 4.7% L: 2.6%		+10.8%	1.42		160 (+3%)	166 (+7%)	Yes
Summer 2019 performance assessment								
<p>The average en-route delay per flight increased from 0.98 minutes per flight in Summer 2018 to 1.42 minutes per flight in Summer 2019. 59% of the Summer delays were for the reason ATC Capacity, 37% for Weather and 3% for ATC Staffing.</p> <p>The capacity baseline was measured using ACCESS at 166. During the measured period, the average peak 1 hour demand was 178, and the average peak 3 hour demand was 163.</p>								
Operational actions				Achieved	Comments			
Upgrade and extension of AMC Portal				Yes				
Integration of TMAs in the network through the implementation of the FABCE concept of seamless operations for the TMAs within Zagreb FIR				Yes				
Implementation of PBN procedures in TMA airspace				Yes				
Enhanced ATFM techniques (STAM Phase II)				Yes				
Enhanced sectorisation according to the FABCE Airspace Plan				Yes				
Changes of areas of responsibility between Zagreb and BH ACCs (Phase 2 BHANSA)				Yes	Preparations finalised to the cutover on 05 Dec. '19			
Full lateral and vertical implementation of Central sector below FL355				No	Postponed for Feb. 2020			
Optimization of manpower planning				Yes				
Additional ATCOs as required (~6 per year)				Yes				
Development of supporting tool for sector configuration management				No	To be implemented in 2020			

Re-assessment of sector capacities according to new CAPAN study	Yes	
Improved sector opening times	Yes	
Maximum configuration: 11 sectors	Yes	

## Planning Period 2019-2024

The planning focuses on the summer season to reflect the most demanding period of the year from a capacity perspective. This approach ensures consistency with the previous planning cycles.

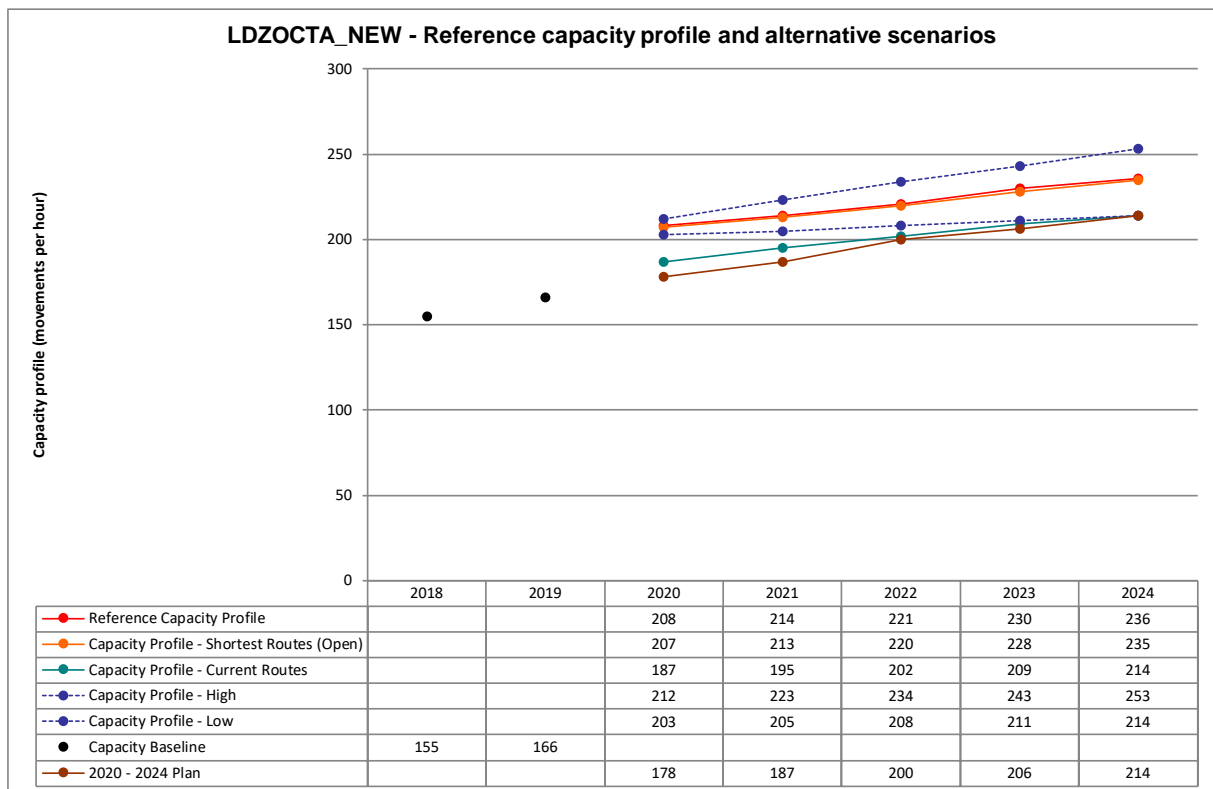

The measures for each year are the measures that will be implemented before the summer season.

Summer Capacity Plan					
	2020	2021	2022	2023	2024
Free Route Airspace					
Airspace Management  Advanced FUA	Implementation of FUA restrictions				
	LARA B2B connection with NM				
	Integration of MALE system				
	Improvement of CDM process and procedures ASM/ATS/ATFCM				
	Upgrade and extension of AMC portal				
Airport & TMA Network Integration		Redesign of Adria TMA airspace			Multi-use facility in Zadar with enhanced APP service
Cooperative Traffic Management		Enhanced ATFM techniques (STAM Phase II)			
Airspace	Full lateral and vertical implementation of Central sector		Implementation of Adria TMA airspace		
Procedures	New ops procedures in line with implementation of Central sector		New ops procedures in line with implementation of Adria TMA airspace		
Staffing	Optimization of manpower planning				
	Additional ATCOs as required (No. per year below)				
	9	9	11	6	7
Technical		COOPANS FRA package upgrade	Installation of a national Wide Area Multilateration (WAM) system		Multi-use facility in Zadar- extended ACC (contingency)
	Supporting tool for sector configuration management				
	Continuous ATM system upgrades				
Capacity	New opening scheme according to implementation of Central sector		New opening scheme according to implementation of Adria TMA airspace		
			Re-assessment of sector capacities according to implementation of Adria TMA airspace		
			Supporting tool for complexity management		
Significant Events					

	2020	2021	2022	2023	2024
Max sectors	12	12	12	12	12
Planned Annual Capacity Increase	7%	5%	7%	3%	4%
Reference profile Annual % Increase	25%	3%	3%	4%	3%
Current Routes Profile % Increase	13%	4%	4%	3%	2%
Difference Capacity Plan v. Reference Profile	-14,4%	-12,6%	-9,5%	-10,4%	-9,3%
Difference Capacity Plan v. Current routes Profile	-4,8%	-4,1%	-1,0%	-1,4%	0,0%
Annual Reference Value (min)	0.36	0.36	0.25	0.15	0.15
Additional information					

An outline of available sector configuration for a typical weekday and a weekend day for the summer months 2020 (all times UTC)

#### 2020-2024 Planning Period Outlook

Even though continuous improvements are planned, a potential capacity gap could be expected during the planning period depending on the actual evolution of the traffic distribution over the current routes.

## 3. Implementation Projects

The tables below presents the high-level information about the main projects currently ongoing in Croatia. The details of each project are available in Chapter 2 of the Level 2 - Detailed Implementation Status document.

### 3.1. National projects

Name of project:	Organisation(s):	Schedule:	Status:	Links:
ATM System Upgrade	CCL Service Provider (HR)	-	active	L3: ATC02.5, ATC02.6, ATC02.7, ATC07.1, ATC12.1, ATC15.1, ATC16, ATC17
AWOS/MET Systems Modernization and Replacement Project	CCL Service Provider (HR)	-	active	-
Ground-based Surveillance Systems Upgrade	CCL Service Provider (HR)	-	active	L3: ITY-SPI
NAV Systems Modernization and Replacement Project	CCL Service Provider (HR)	-	active	L3: NAV03.1, NAV10
Reconstruction of Old Buildings	CCL Service Provider (HR)	-	active	-
VARP - VoIP ATC Radio Project (2015_051_AF3)	CCL Service Provider (HR)	15/02/2016 - 05/11/2020	-	DP: 2015_051_AF3
VOICE-COM Systems Modernization and Replacement Project	CCL Service Provider (HR)	-	active	L3: COM11, ITY-AGVCS2
Zadar Facility	CCL Service Provider (HR)		planned	

### 3.2. FAB projects

Name of project:	Organisation(s):	Schedule:	Status:	Links:
DEVOPS: FABCE Development of Operational Performance and ATM Strategies (previously Project 1) (DEVOPS)	ASP ANS CR (CZ), Austrocontrol (AT), BHANSA (BA), CCL Service Provider (HR), HungaroControl (HU), Letové prevádzkové služby Slovenskej republiky, štátny podnik (SK), Slovenia Control (SI)	Project 1: Start 3.1.2011, End: Continuous	FAB CE FRA Study was completed in 2017 Other activities described below are ongoing	L3: AOM21.2 DP: 102AF3 Free route airspace from the Black Forest to the Black Sea RP2 PP: FAB CE FRA Project (described under NSP actions 'FAB CE Airspace and route structure planning' and 'Free Route Airspace')
Navigation infrastructure optimization project	ASP ANS CR (CZ), Austrocontrol (AT), BHANSA (BA), CCL Service Provider (HR), HungaroControl (HU), Letové prevádzkové služby Slovenskej republiky, štátny podnik (SK), Slovenia Control (SI)	Start: April 2018, End: April 2019	On-going	-

### 3.3. Multinational projects

Name of project:	Organisation(s):	Schedule:	Status:	Links:
Harmonisation of Technical ATM Platform in 5 ANSP including support of free Route Airspace and preparation of PCP program (COOPANS B3.3 , B3.4 and B4.1) (2015_207_AF3_A; 2015_207_AF3_B)	Austrocontrol (AT), CCL Service Provider (HR), IAA-ATS Provider (IE), LFV (SE), Naviair (DK)	01/01/2016 - 31/12/2019	-	DP: 2015_207_AF3_A and 2015_207_AF3_B

## 4. Cooperation activities

### 4.1. FAB Co-ordination

Having signed and ratified the Agreement on the Establishment of Functional Airspace Block Central Europe, Austria, Bosnia and Herzegovina, Croatia, the Czech Republic, Hungary, Slovakia and Slovenia are part of FAB CE.

The FAB CE States agreed on establishment of the following permanent bodies - the FAB CE Council, NSA Coordination Committee and Joint Civil-Military Airspace Coordination Committee. The FAB CE Council can also establish other bodies necessary for the implementation, operation and further development of the FAB CE Programme. At the ANSP level, the FAB CE is directed and steered by the CEO Committee and Steering Committee. Specialised SubCommittees have been established for operational, technical, safety, financial, HR and legal domains.

The air navigation service providers of the FAB CE countries established a joint company **FABCE Aviation Services, Ltd** (FCE) already in 2014 and the company is responsible for the professional management of various regional air navigation projects. The establishment of this joint venture is not only effectively aiming at the progress of the FAB CE programme, but at the same time the Single European Sky programme of the European Union. In 2018, the ANSPs decided to modify the FCE Memorandum of Association and Shareholders Agreement which now allows technical and operational projects to be launched by a group of FAB CE partners focused on a specific area of air traffic management performance improvement. Not all FAB CE ANSPs share the same operational, traffic load and equipment priorities, but until now there was a need for the consent of all partners to proceed. This agreement allows FAB CE partners with a focus on a specific area of performance improvement to form new collaborative agreements which helps to address specific customer requirements while increasing the overall effectiveness of the FAB CE work programme.

There have been a number of important achievements in 2019 focusing on several key areas. The following bullets summarise the most important activities delivering the benefits to airspace users:

- Airspace planning and network development activities focusing on continuous improvements to enable optimum use of airspace, taking into account air traffic flows are the top priority for FAB CE. The FAB CE ANSPs have transformed themselves into a 'FAB CE Airspace Alliance' in 2018 and dedicated a lot of effort to initiate actions to be taken by FAB CE ANSPs in support of the Network Manager's (NM) European Airspace Architecture Study (EAAS) airspace re-configuration programme Transition Plan. The ANSPs agreed a number of important airspace design improvement studies and related technical programmes to ensure airspace users can further optimise their trajectories through FAB CE airspace over the coming years. This triggered also a complete revision of the FAB CE Strategy for 2020-2030 to be fully aligned with the EAAS vision which has been mostly completed in 2019 and is now pending approval. More detailed actions how to achieve the vision are now being elaborated in the new FAB CE High Level Plan.
- FAB CE has established a Task Force to study further areas of regional cooperation with the aim of establishing an airspace design optimized for all airspace users aligned with the EAAS activities. FAB CE is fully prepared to cooperate with the Network Manager, supporting the planning and implementation of proposed concepts in a network centric approach and the implementation of Digital European Sky functionality, which was confirmed at the joint meetings with NM under the umbrella of this activity. FAB CE invited the NM to participate directly in the FAB CE Airspace Task Force activities and started to gather all requirements and views on NM roadmap proposals for a major re-sectorisation of FAB CE airspace.
- The FAB CE states, together with their neighbouring partners, are still at the frontline of the Free Route Airspace (FRA) implementation in the region. The NM confirmed at the that FAB CE is the most advanced FAB in terms of FRA deployment and very few elements are missing from the complete deployment of FRA procedures in the FAB CE area. Further organic expansion of FRA through the Introduction of the new sectorisation programme will need to be performed gradually. The completion of the SEE FRA project (South East Europe Free Route Airspace) on November 7, 2019 has opened up 24/7 cross border free route operations across the airspace of Bulgaria, Hungary and Romania. As a future step, Slovakia (as a part of SEEN FRA project - South East Europe Night Free Route Airspace together with Bulgaria, Hungary and Romania), will assess the opportunities to join the SEE FRA airspace as 24/7 free route operations are already implemented within Slovakian airspace.

To enable the full benefits of FRA implementation the FAB CE ANSPs agreed to start work on the implementation plan for the merger of the current SEE(N) FRA and SECSI FRA areas to enable FAB CE-wide seamless and traffic flow-oriented FRA area. Full FRA coverage in FAB CE will be achieved following the implementation in 2021 by ANS Czech Republic of FRA in the Prague flight information region (FIR).

- FAB CE ANSPs have completed Phase I of an activity to develop a joint contingency concept in cooperation with the Network Manager in 2018. Phase I resulted in commonly agreed concept, procedures and technical enablers for the management of short- and medium-term (less than 2 hours) contingency event. FAB CE has now initiated Phase II which will address management of long-term contingency events (beyond 2 hours duration) and will provide for a common coordination platform for coordinating and monitoring the implementation activities of Phase I. Due to the delays in NM coordination the project mobilisation has been however delayed and activities are planned to take place during 2020.
- The NAVAID optimisation project (which will improve interoperability and data-sharing through the optimisation of navigational aid infrastructure, reducing duplication and unnecessary complexity) significantly progressed in 2019. The processes for coordinated NAVAID infrastructure and preventive maintenance planning and information-sharing where operational dependencies are evident have been developed and are in the process of implementation. The second part of the project is focusing on an analysis of NAVAID infrastructure and coverage - including those of neighbouring countries, is ongoing and is expected to be completed in the first quarter of 2020. The objective is to identify potential areas for improvement, including operational interdependencies and requirements. The third part, which is now completed, focused on solving operational issues – namely, assessing vulnerabilities within the global navigation satellite system (GNSS) network. This will require addressing signal monitoring and interference issues while assessing how free route airspace will influence the requirements for ground-based NAVAIDs in this new era of area navigation operations.
- FAB CE ANSPs finalised their common approach to meeting the requirements for Air Traffic Safety Electronics Personnel (ATSEP) training required by European Commission Regulation 2017/373, the “Air Traffic Management Common Requirements Implementing Regulation” (ATM IR), which comes into effect on 2 January 2020. It has required a considerable level of cooperation among FAB CE partners to develop a common approach to certifying ATSEP competency levels as each ANSP has deployed different technologies, and has different support and training requirements.
- In 2019, FAB CE has identified and initiated a number of cooperation activities in the technical domain. These include a coordinated approach to ADS-B deployment, coordinated monitoring and protection of surveillance frequencies, common approach to datalink monitoring. Several ANSPs participate in the smart procurement of spare parts procurement and equipment suppliers have been contacted to investigate procurement pooling arrangements. The processes established under the previous project on surveillance infrastructure and services optimisation are ongoing. A group of the ANSPs is working on coordinated testing to enable sharing of the experience between ANSPs and allow more efficient planning of VoIP. Other cooperation activities include the assessment of the future FAB CE communication network called X-bone, joint RCOM and NAV workshops and coordination of the cyber security activities.

The FAB CE Programme is continuously updated by the FAB CE bodies under management of the FAB CE Programme Manager with the support of the FAB CE Programme Support Office and there are a number of pending projects focusing on delivering additional benefits to airspace users that will be implemented in the near future.

## 4.2. Multinational cooperation initiatives

In order to achieve some of the objectives of the ATM MP Level 3, Croatia will have to co-ordinate some of its actions with a number of foreign adjacent ACCs/UAC. The LSSIPD will also help to foster regional coordination with neighbouring states by identifying mutually dependent actions. Croatia constantly promotes and boosts the co-operation in the region through their active participation in several regional initiatives and agreements.

Inter-Centre Agreements on co-ordination procedures, which are in accordance with EUROCONTROL Common Format Letter of Agreement, LoAs, are signed with the following ACCs:

- BUDAPEST,
- VIENNA (for Slovenian MURA Sector),
- LJUBLJANA,
- PADOVA
- BRINDISI
- BELGRADE
- SARAJEVO

EUROCONTROL Revised Convention has been ratified in September 2005 by the Croatian Parliament. The accession protocol of the EU to the EUROCONTROL revised convention has been ratified in December 2016.

The European Common Aviation Area agreement has been ratified by Croatian Parliament in 2008.

The “A6 Alliance” was set up informally in 2007 between the ANSPs interested in accession to SJU membership, i.e.:

- ENAIRE, the Spanish ANSP;
- DFS, the German ANSP;
- DSNA, the French ANSP;
- ENAV, the Italian ANSP;
- NATS, the British ANSP;
- NORACON, (the North European and Austrian Consortium).

After the successful cooperation for accession to SJU membership, it was decided to formalize the A6 Alliance through a Memorandum of Cooperation, which was concluded in June 2011.

The aim of the cooperation and coordination between the 6 parties was to provide customer value through improving the ATM performance at a European Network Level and increasing the pace of delivering the Single European Sky. The main areas of cooperation relate to general fields of mutual interest (e.g. best practice, harmonized strategy etc.), the SESAR R&D phase and SESAR deployment phase.

The governance of the A6 Alliance is ensured by a Steering Board composed of CEOs, which meets on a quarterly basis and is supported by a Strategy Board composed of senior managers. An R&D Working Group and a Deployment Working Group organize co-operation at expert level.

#### South East Europe Common Sky Initiative (SECSI FRA)

Following the successful implementation of the SAXFRA (Slovenian Austrian Cross-border Free Route Airspace) and SEAFRA (South-East Axis Free Route Airspace - project of three ANSPs from Bosnia and Herzegovina, Croatia, Serbia and Montenegro) initiatives in 2016, both initiatives have been in 2017 merged into the South East Europe Common Sky Initiative (SECSI FRA) creating a large cross-border FRA block including Austria, Bosnia and Herzegovina, Croatia, Serbia and Slovenia.

The SECSI FRA went operational on the 1<sup>st</sup> of February 2018 offering airspace users significant benefits along the South East Axis, by delivering the shortest route options from Central Europe to South Eastern Europe. The benefits gained through the SECSI FRA are substantial. Based on the shortest route assignment potential savings per day are up to 1.940 NM in flight distance, 285 minutes in flight time, a reduction in fuel consumption of 8,000 kg and a reduction in CO2 emissions of 25.500 kg.

The SECSI FRA will make more options available when determining the user-preferred trajectory. Full cross-border FRA allows airlines to take better advantage of wind or adapt to network disruptions. The better use of FRA options at flight planning level improve predictability and reduce ATC workload. This initiative not only works towards achieving the goals of the European Commission regarding the implementation of “Free Route” across Europe but also fulfils airspace user’s requests for having multiple route options available for the same city-pair.

### South East Europe Night Free Route Airspace (SEEN FRA)

On the 30<sup>th</sup> March 2017, the DANUBE FAB (Romania and Bulgaria) and Hungary introduced SEEN FRA by bridging the airspace between the two Functional Airspace Blocks of the DANUBE FAB and FAB CE during the time period 2300-0500 (2200 - 0400) UTC. At the end of 2018, the initiative was expanded by the airspace of Slovakia. From the 6<sup>th</sup> December 2018, aircraft operators are thus able to plan their flights freely across the airspace of four States covering parts of two FABs without having to take into account the limitations imposed by geographical borders. The new flight planning rules significantly optimize flight trajectories to provide the shortest possible connections and the most effective routings when changes to the flight plan – to avoid adverse weather, for example – are required. According to simulations of the airspace, change the synergistic effect of all improvements could reduce trajectories by a daily average of 3.200 NM, which equates to 15 tonnes of fuel and 49 tonnes of CO<sub>2</sub> emissions.

Further improvements to Central and South-Eastern European airspace configurations will take place in 2019. From April 2019, 24-hour FRA will be implemented within Slovakian airspace and during summer 2019 LPS SR will consider extending SEEN FRA availability for longer periods of the day. From 7 November 2019, the three countries initiating the SEEN FRA programme (Bulgaria, Hungary and Romania) will extend the availability of cross-border FRA operations across the entire day with the introduction of the South East Europe Free Route Airspace (SEE FRA) project.

The A6 Alliance quickly became an important player and a key stakeholder of the Single European Sky and has made significant and remarkable contributions to the SESAR JU, for example on the occasion of the ATM Master Plan Updates (editions 2012 and 2015).

PANSA became then a full member of the A6 Alliance, which also developed a close partnership with the COOPANS<sup>3</sup> ANSPs, and a strong relationship with the A4 (Airlines) and the SDAG (airports) which has resulted in the setup of an industry led consortium (SESAR Deployment Alliance (SDA)). On December 5th 2014, the European Commission tasked the SDA with the setup of the SESAR Deployment Manager, thus strengthening its legitimacy in actively contributing to SESAR deployment.

This partnership between ANSPs led to the formal integration of COOPANS into the A6 Alliance for SESAR Deployment Manager activities in 2015 and, strengthened by its wide membership, the A6 Alliance members has been able since then to provide significant support either in logistics or in human resources to the SESAR Deployment Manager.

The A6 Alliance leads European-wide technical activities validated and co-funded by the EC for their consistency with the SES framework. Through the EC Connecting Europe Facility (CEF) financial program, successive proposals and actions driven by the SESAR Deployment Manager allowed significant contributions to ATM industry implementation projects within SESAR Common Projects deployment priority (currently only Pilot Common Project – PCP).

Moreover, in the context of SESAR2020, the B4<sup>4</sup> Consortium joined the A6 Alliance in 2015 and, after having been associated through an agreement established with A6 Alliance in order to authorize exchanges between their experts in the domain of R&D, Skyguide became by the end 2017 a full member of A6 through an ad-hoc consortium agreement with DSN.

Finally, the A6 associated for the purpose to ROMATSA (Romanian ANSP) and HungaroControl (Hungarian ANSP) and in cooperation with its A4 and SDAG partners, prepared in 2017 the establishment of SDA consortium into an AISBL<sup>5</sup> that became effective on 01/01/2018, for the benefit of the whole ATM industry and their end customers.

---

<sup>3</sup> ACG, Croatia Control, IAA, LFV and Naviar together form the COOPANS Alliance Innovative Network

<sup>4</sup> PANSA, ANS CR, LPS SR and Oro Navigacija together form the B4 Consortium

## 5. Implementation Objectives Progress

### 5.1. State View: Overall Objective Implementation Progress

The graph below shows progress for all Implementation Objectives (applicable and not applicable to the State).

In the period 2018-2019 we finished following objectives:

COM 10 - Procurement of a new AMHS was in 2012, implementation in 2014. An operational AMHS connection is in place with Vienna, Rome, Eurocontrol, Madrid, Bratislava and Warsaw. Intended operational AMHS foreseen with other partners in EUR/NAT region supporting full meshed topology. Croatia is not a boundary state in EUR region. Some ATMHS Extended functionalities already implemented.

The problems that we had in completing objectives for 2018-2019 were following:

AOP 04.2 - ASMGCS Level 2 planned for implementation before end 2019. (ASMGCS Level 1 is operational since 2018; upgrade to Level 2 is in progress).

AOP 05 - Zagreb intent is to start improving information sharing within existing systems and local specific environment. Zagreb is added in applicability area and CDM/DPI implementation list in the 2018 MP L3 Plan. However, the goal is to have continuous improvement of airport operational efficiency. Since March 28th 2017, all activities have been transferred to new passenger terminal. Transfer to new facilities has brought prerequisites for continuous growth of traffic. In order to meet growth of traffic and optimisation of operational performances, Zagreb International Airport has developed "CDM Implementation Project - Phase 1" as the basis for next steps and agreements towards future implementation of airport CDM.

ATC 12.1 - MTCD and MONA are in operational use since 2005, a probe function exists with no passive resolution support. Passive resolution support is under development. Currently, no plan exist for implementation of TCT.

INF 07 - The Ministry of the Sea, Transport and Infrastructure will establish a working group, which will be tasked to draft the national TOD policy and implementation programme. National TOD policy is in preparation by DGCA. CCAA will draft the plans and procedures to oversight the TOD implementation, based on TOD Policy and framework.

ITY-ADQ - CCAA established a national working group for national implementation of ADQ requirements. Croatia has only partially implemented the requirements set for 1st July 2013 and 1st July 2014. Due to announced Installation of new ANSP Aeronautical Information Management (AIM) System, delay is expected.

Here are also plans for completing objectives due for 2019-2020:

AOM 19.1 - Automated ASM support systems (CIAM, LARA) are fully operational as of December 2017. Local tool for measuring of FUA indicators (FIMS/CroFAST) is in operation from 01.01.2020.

AOM 19.2 - Procedures related to real-time (tactical) ASM level III information exchange are agreed, tested & validated, implementation date is set for 31/12/2021, upon validation of National high level airspace policy body (NPUZP).

AOM 19.3 - LARA V3 supports full rolling ASM/ATFCM process. Objective is linked with one of the FAB CE projects - see details in Chapter 5 of Level 1 document.

ATC 02.8 - APW available and operational. MSAW function available in the system. Operational implementation has been delayed due to false and nuisance alerts which have a safety impact. Waiting deliverable for compliance. Training for the operational use will be performed before implementation. APM implementation plan, as part of MSAW implementation will be developed during 2020.

ATC 15.1 - AMAN is a function in the new ATM system as of 2014. During 2016 a request was received for information exchange mechanisms supporting basic AMAN (AMA message reception), implementation is planned before 2020.

COM 11.1 - Implementation of VoIP in G/G voice communication is planned to be done by Q2/20., whilst implementation of VoIP in A/G voice communication is planned to be done by Q4/21.

ENV 01 - Zagreb International Airport has ISO 14001 certificate and has established system for noise monitoring. Zagreb International Airport will follow necessary steps towards CDO in coordination with CroControl in order to set up appropriate models for performance monitoring and appropriate links with local community. With reference to current CroControl actions - The CDO Operations in Airport Zagreb are considered through PBN implementation process in Zagreb FIR.

FCM 03 - Most SLoA have been completed with implementation of the new ATM system in 02/2014. Validation of automatic sending AFP messages to NM didn't resulted with approval from NM. AFP is sent manually.

ITY-ACID - Mode S airspace is currently declared in Zagreb FIR from FL205 up to FL660. CCL plans to declare Mode S airspace bellow FL205, as well as the relevant airports by the end of 2019. Technical capabilities exists, training of the TMA ATCO and revised safety assessment is foreseen.

ITY-AGVCS2 - All voice communication systems are currently in modernization. The first phase is expected to finish by 03/2015 (90% of equipment) and the second phase by 05/2017 (10% - small airports) All radio equipment will be modernized according to the IR 1079/2012 by 12/2020.

NAV 03.1 – RNAV 1 SID/STAR and changed RNP APCH implementation is planned for Zagreb TMA and Osijek TMA by 4/2019. Other TMA's will follow RNAV 1 SID/STAR and RNP APCH implementation by 12/2019 until 1/2020. LDDU RNP AR RWY 30 was implemented by CCL on December 2018. LDSP RNAV Visual RWY23 was implemented in July 2018 and implementation a similar RNAV VISUAL with RF leg is planned for LDOS RWY 29 and LDDU RWY30 by 12/2020. New flight trials for SID/STAR RNAV will take place during February and September 2019. New RNP APCH implementation is planned for LDRI, LDSB by 12/2020.

NAV 10 - Baro VNAV and LNAV procedures are being designed in accordance with the conclusions of ICAO 37th assembly. RNP Procedures are completed for all airports except for LDLO and LDOS RWY29, to be completed before end 2020.

## 5.2. Objective Progress per SESAR Key Feature

The Implementation objectives progress charts per Key Feature below show progress only for Implementation Objectives applicable to the State/airport and which are not local objectives.

Note: The detailed table of links between Implementation Objectives and SESAR Key Features is available in Annex C: Implementation Objectives' links with SESAR, ICAO and DP.

Legend:

▲ ## % = Expected completion / % Progress

▲ 100% = Objective completed

 = Implementation Objective timeline (different colour per KF)

 = Completion beyond Implementation Objective timeline

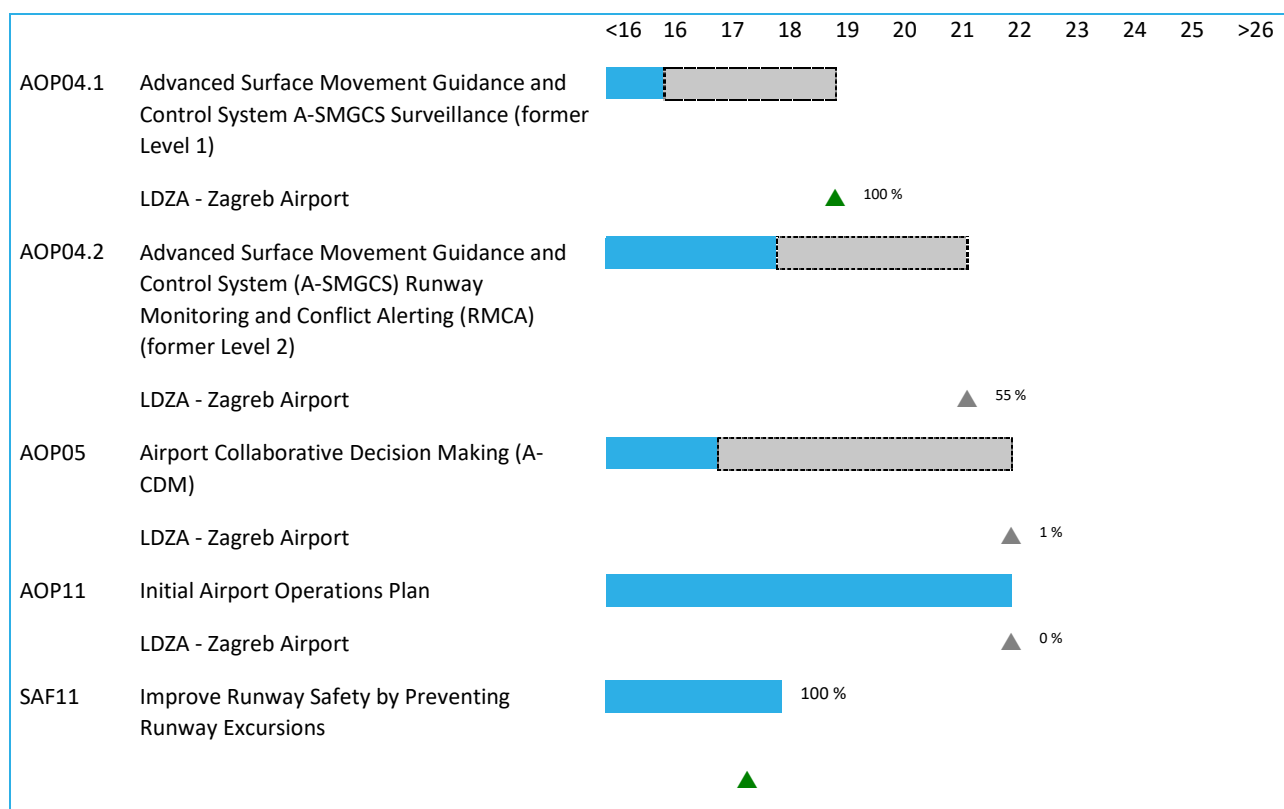

### Optimised ATM Network Services

## High Performing Airport Operations

## Enabling Aviation Infrastructure

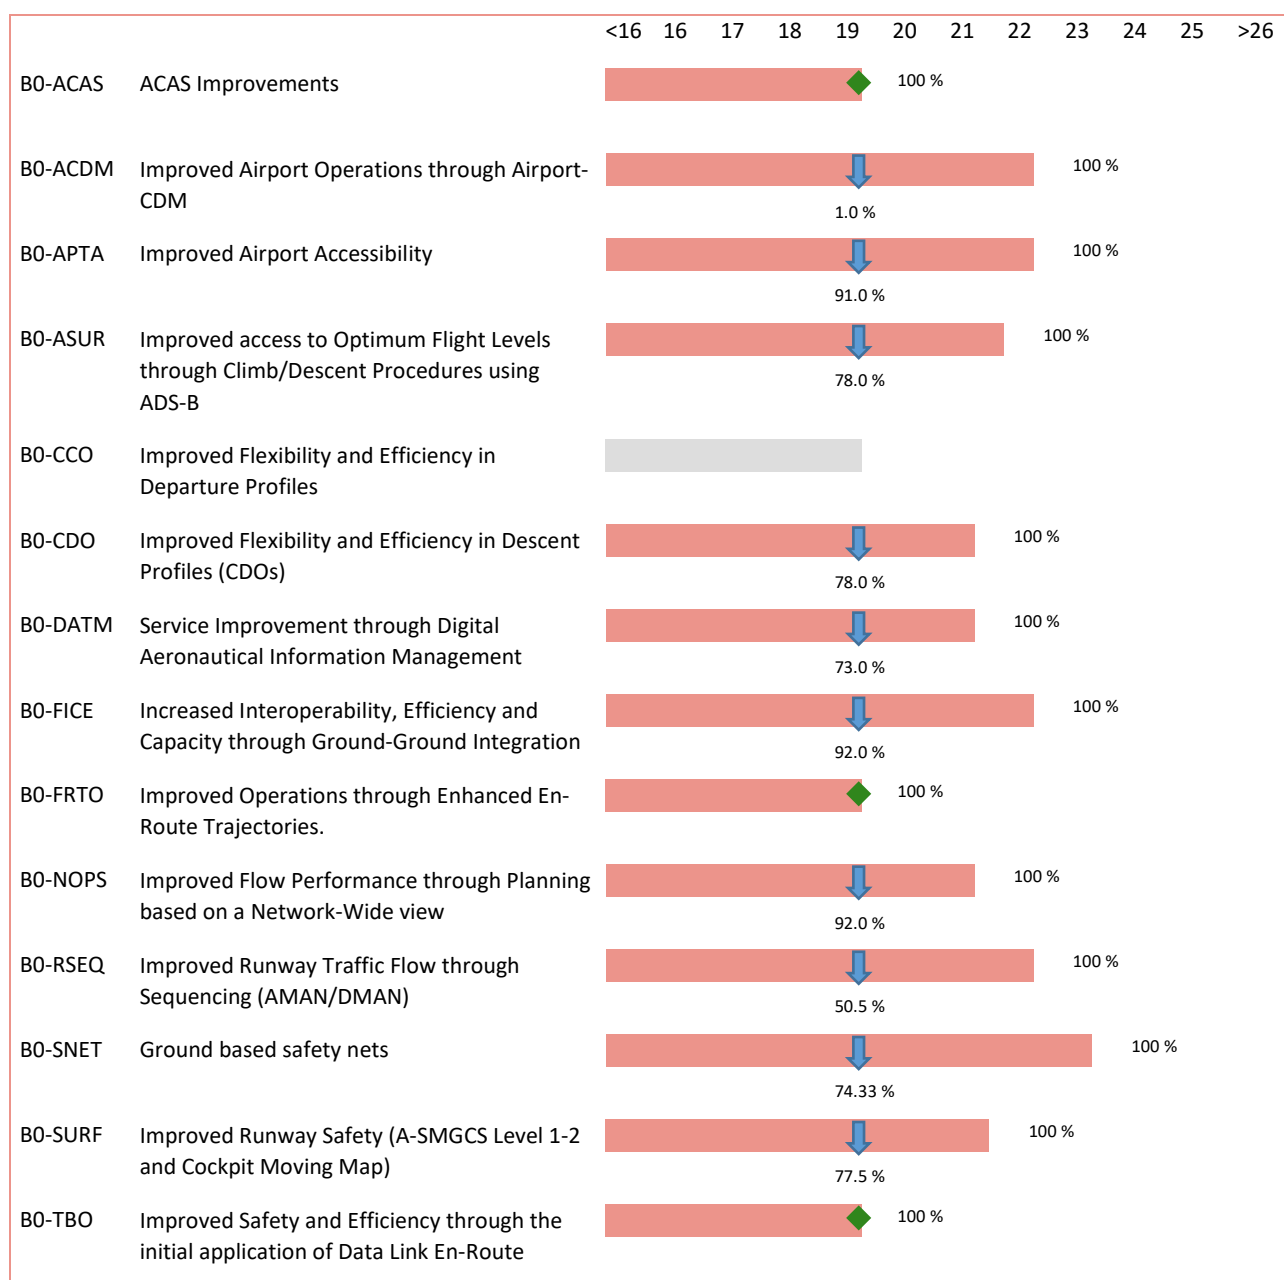

### 5.3. ICAO ASBU Implementation Progress

The following table shows, for each of the ASBU Block 0 modules, the overall status, the final date foreseen for completion and the percentage of progress achieved in the current cycle.

These results were determined using the LSSIP Year 2019 declared statuses and progress of the relevant Implementation objectives in accordance with the mapping approved by the ICAO EUR EASPG/1 (European Aviation System Planning Group).

Legend:

## 5.4. Detailed Objectives Implementation progress

Objective/Stakeholder Progress Code:			
Completed		Not yet planned	
Ongoing		Not Applicable	
Planned		Missing Data

LDZA - Zagreb Airport				
Zagreb intent is to start improving information sharing within existing systems and local specific environment. Zagreb is added in applicability area and CDM/DPI implementation list in the 2018 MP L3 Plan. However, the goal is to have continuous improvement of airport operational efficiency. Since March 28th 2017, all activities have been transferred to new passenger terminal. Transfer to new facilities has brought prerequisites for continuous growth of traffic. In order to meet growth of traffic and optimisation of operational performances, Zagreb International Airport has developed "CDM Implementation Project - Phase 1" as the basis for next steps and agreements towards future implementation of airport CDM.			31/12/2021	
ASP (By:12/2016)				
CCL Service Provider	Zagreb International Airport has developed CDM implementation framework under "CDM Implementation Project - Phase 1" as the basis for next steps and agreements with stakeholders. ZIA is collaborating with CCL and a CDM is proposed as a way of improving operational planning and information exchange in relation to A-SMGCS. Operational procedures are described in LoA but need to be revised to the A-CDM Manual standard. Information sharing procedures yet need to be defined.	-	0%	Not yet planned
APO (By:12/2016)				
MZLZ - Zagreb Airport Operator Ltd.	Currently, Zagreb is not referred within applicability area and CDM/DPI implementation list. ## D. Implementation of U-Space Services

This annex provides an overview of the current implementation progress and short to medium term planning information on the main elements underlying the provision of the 16 U-Space services enabling Very Low Level drones operations. Those elements are expected to be available in phases U1 (2019) to U3 (2025) as described in the European ATM Master Plan add-on: Roadmap for the safe integration of drones into all classes of airspace.

Phase	Service	Service Element	Progress	Implementation Date	Comment
U1	e-Registration	Registration enforcement implemented	Completed	15-12-2018	In the absence of EU regulation, national regulation enforced registration for certain categories of UAS and UAS operators. After the publication of EU UAS regulation, national regulation is already in line with EU regulation.
U1	e-Registration	Remote Identification system add-on registration service available (i.e. device physical serial number)	Completed	15-12-2018	Serial numbers of UA are required during registration and stored in database.
U1	e-Registration	UA online registration service available	Completed	01-06-2019	Available through NSA online tool.
U1	e-Registration	UAS operator online registration service available	Completed	01-06-2019	Available through NSA online tool.
U1	e-Registration	UAS operator registration procedure implemented (e.g. national registration number)	Completed	01-06-2019	Available through NSA online tool and its database.

Phase	Service	Service Element	Progress	Implementation Date	Comment
U1	e-Identification	Authority in charge of issuing and managing identification numbers (i.e. code allocation and coordination) established	Completed	15-12-2018	Designated authority is the NSA.
U1	e-Identification	E-identification enforcement implemented	Completed	15-12-2018	E-identification functionalities are enforced through national Airspace Management regulation.
U1	e-Identification	The identification service includes the localisation of the drones (i.e. position and time stamp)	Completed	01-02-2019	Identification service is implemented through ASM procedures and functions of the AMC Portal system. Position of the drone is localized within defined UAS operation area. Each flight within area is notified to the national ASM thru mobile application, with real time status.
U1	Pre-tactical geo-fencing	Geo-limitation database available	Completed	01-06-2017	Database is available through AMC Portal system functionalities.
U1	Pre-tactical geo-fencing	Pre-defined restricted areas implementation	Completed	01-06-2017	Available through AMC Portal system functionalities.
U1	Pre-tactical geo-fencing	User access to AIP and NOTAM provided (i.e. to feed drones embedded geofencing features)	Completed	01-02-2019	Available through mobile application of AMC Portal system.

Phase	Service	Service Element	Progress	Implementation Date	Comment
U2	Tactical geo-fencing	Geo-awareness information available (e.g. geofence and flight restriction information provided up to the moment of take-off)	Completed	01-02-2019	Available through AMC Portal system mobile application. (Was available thru web page before that date.)
U2	Tactical geo-fencing	Real-time pre-defined restricted areas information data feed available	Completed	01-02-2019	Available through AMC Portal system mobile application. (Was available thru web page before that date.)
U2	Tactical geo-fencing	Restricted area infringement notification implemented (based on ownship data)	Ongoing	01-01-2022	
U2	Flight planning management	Airspace authorisation and flight planning approval processes available	Completed	01-02-2019	Was available through the AMC Portal system before 2019. Since 01/02/2019 available through AMC Portal system mobile application in real time.
U2	Flight planning management	Automated flight plan validation capability available	Ongoing	01-01-2022	
U2	Flight planning management	Digital notification (i.e. digital NOTAM) capability available	Completed	01-02-2019	AMC Portal mobile application sends digital notifications in real time.
U2	Flight planning management	Flight plan preparation/op timisation capabilities available	Planned	01-01-2022	

Phase	Service	Service Element	Progress	Implementation Date	Comment
U2	Flight planning management	Flight planning support publications available (e.g. obstacles maps; population density maps; risk reduction)	Planned	01-01-2023	
U2	Weather information	Collection of weather information from different stakeholders implemented (including return of weather info drone to UTM)	Planned	01-01-2023	
U2	Weather information	Hyperlocal weather information available	Planned	01-01-2022	
U2	Weather information	Low-altitude wind forecasting information available	Ongoing	01-06-2020	
U2	Weather information	Predictive weather hazard alerts at planned drone mission sites available	Planned	01-01-2021	
U2	Weather information	Real-time low-altitude wind actual information available	Ongoing	01-01-2022	
U2	Tracking	Cooperative UAS positioning infrastructure available	Completed	01-02-2019	

Phase	Service	Service Element	Progress	Implementation Date	Comment
U2	Tracking	Non-cooperative UAS tracking capabilities available (e.g. at airports; high value assets)	Planned	01-01-2021	
U2	Tracking	Real-time tracking capabilities available (e.g. location reports; data fusion from multiple sources)	Planned	01-01-2021	
U2	Tracking	Surveillance data exchange interface available (i.e. capability to exchange data among the tracking service and other services/systems)	Ongoing	01-01-2021	
U2	Tracking	Tracking data recording capability implemented	Ongoing	01-01-2021	
U2	Monitoring	Air situation-monitoring capability available (depending on the level of tracking available. See U2 Tracking capabilities)	Completed	01-02-2019	
U2	Monitoring	Alert/Report line available	Completed	01-02-2019	

Phase	Service	Service Element	Progress	Implementation Date	Comment
U2	Monitoring	Flight non-conformance detection capability available	Planned	01-01-2021	
U2	Monitoring	Non-cooperative drones identification capability available to law enforcement, regulatory authority and service providers	Planned	01-01-2021	
U2	Monitoring	Provision of traffic information to UAS operators implemented	Ongoing	01-06-2020	
U2	Monitoring	Restricted area infringement detection capability available (based on surveillance data)	Planned	01-01-2021	
U2	Drone aeronautical information management	UTM-relevant dynamic aeronautical data available (i.e. provision of information to geofencing and mission planning services)	Completed	01-02-2019	
U2	Drone aeronautical information management	UTM-relevant static aeronautical data available	Completed	01-02-2019	

Phase	Service	Service Element	Progress	Implementation Date	Comment
U2	Procedural interface with ATC	ATC/UAS coordination procedures defined according to airspace classification	Completed	01-10-2019	
U2	Procedural interface with ATC	Emergency and contingency procedures implemented	Completed	01-10-2019	
U2	Procedural interface with ATC	Flight notification procedures to nearby airports operators (i.e. AFIS; ATC; FIS) implemented	Completed	01-10-2019	
U2	Procedural interface with ATC	Pre-tactical controlled airspace access coordination processes available	Completed	01-10-2019	
U2	Procedural interface with ATC	Rules awareness service adapted to specific areas, time, type of operations	Completed	01-10-2019	
U2	Procedural interface with ATC	UAS access conditions prescription (for specific volumes of airspace) implemented	Completed	01-10-2019	
U2	Emergency management	Emergency alert line available	Completed	01-02-2019	

Phase	Service	Service Element	Progress	Implementation Date	Comment
U2	Emergency management	Provision of assistance information to UAS operator in case of emergency implemented	Completed	01-02-2019	
U2	Strategic de-confliction	Manned-unmanned aircraft deconfliction capability available	Completed	01-02-2019	Through ASM procedures.
U2	Strategic de-confliction	Pre-flight information provision involving de-confliction management function	Planned	01-01-2023	
U2	Strategic de-confliction	Strategic de-confliction capabilities based on mission plans analysis (e.g. conflicts identification; solution proposal) available	Planned	01-01-2023	
U3	Dynamic geo-fencing	Datalink connectivity to geofencing function implemented (e.g. through dedicated web service)	Not yet Planned		

Phase	Service	Service Element	Progress	Implementation Date	Comment
U3	Dynamic geo-fencing	Live dynamic restricted areas information data feed available for real-time flight path adjustments	Not yet Planned		
U3	Dynamic geo-fencing	Up-to-date guidance information including safety concerns (e.g. forest fires; major events; VIP travel) provided	Completed	01-02-2019	Available through AMC Portal mobile application
U3	Collaborative Interface with ATC	ATC alert notification implemented	Completed	01-09-2019	
U3	Collaborative Interface with ATC	Global air situation monitoring capabilities available	Ongoing	01-01-2021	
U3	Tactical de-confliction	de-confliction management information transmission from the USSP to the UAS	Not yet Planned		
U3	Tactical de-confliction	de-confliction management information transmission in real-time	Not yet Planned		
U3	Dynamic capacity management	Airspace capacity monitoring capability available	Not yet Planned		

Phase	Service	Service Element	Progress	Implementation Date	Comment
U3	Dynamic capacity management	Management for capacity due to non-nominal occurrences, such as weather hazards or emergency situations	Not yet Planned		
U3	Dynamic capacity management	UAS traffic complexity assessment capability available	Not yet Planned		
U3	Dynamic capacity management	demand and capacity management implemented	Not yet Planned		
U3	Dynamic capacity management	near-real-time flight authorization capability available	Completed	01-09-2019	

## E. SESAR Solutions implemented in a voluntary way<sup>6</sup>

These SESAR Solutions are not included yet in the ATM MP L3 Plan.

EUROCONTROL is tasked by the SJU to identify the implementation progress of functionalities corresponding to validated SESAR Solutions published in the SJU Solutions Catalogue (<https://www.sesarju.eu/newsroom/brochures-publications/sesar-solutions-catalogue>), for which there is no implementation Objective (yet) in the ATM MP L3 Plan. This will allow to identify early movers and to gauge the interest generated by some of these functionalities, with the view of potentially addressing them with new Implementation Objectives in the ATM MPL3 Plan.

A facilitated questionnaire using the existing ATM MP L3 / LSSIP methodology is added to capture information on non-committed SESAR solutions. For practical reasons, since the LSSIP 2017 cycle the questionnaire is included in the LSSIP Annex.

SESAR Solution Code	SESAR Solution Title	Solution Description	Has the SESAR Solution been implemented in your State? (Y-N) - if "Yes" please report where	Are there implementation plans in your State for the SESAR Solution? (Y-N-N/A) - If "Yes" please report when and where implementation is planned - If "N/A" please provide justification
 <b>High Performing Airport Operations</b>				
#23	D-TAXI service for controller-pilot datalink communications (CPDLC) application	Use of data link communications between the Tower Controllers and the flight crew during surface movement. It is based on the D-TAXI service from the CPDLC application, as standardised by RTCA SC214/EUROCAE WG78 (DO-350 & DO-351). It also includes the access to this service for end users, through the Tower CWP for the ATCO and through the aircraft DCU for the flight crew.	N	N
#48	Virtual block control in low visibility procedures (LVPs)	In low visibility conditions, the tower controller working positions are provided with Virtual Stop Bars (VSB) to improve low visibility operations and enhance controllers' situational awareness. Virtual Stop Bars can be used by the controller to reduce block-sizes once procedural control applies. Additional controller safety nets will be available to indicate violations of Stop Bars (including Virtual Stop Bars) and to monitor aircraft for any kind of unauthorised movement (Watch Dog).	N	N

<sup>6</sup> Referred as 'Non-committed' SESAR solutions in the MP L3 Report.

SESAR Solution Code	SESAR Solution Title	Solution Description	Has the SESAR Solution been implemented in your State? (Y-N) - if "Yes" please report where	Are there implementation plans in your State for the SESAR Solution? (Y-N-N/A) - If "Yes" please report when and where implementation is planned - If "N/A" please provide justification
#116	De-icing management tool	<p>The solution increases the accuracy of information related to when the procedure is going to take place, how long it will take and when the aircraft will be ready to taxi for departure, which is currently calculated by predetermined estimates. The solution means that air traffic controllers no longer need to work without situational awareness of de-icing activities and needing to make their own estimates of when aircraft are ready for departure. The solution envisages that de-icing operations are no longer characterised by the A-CDM concept as 'adverse conditions', i.e. a state that is in need of collaborative recovery procedures, but rather a part of normal operations in the winter period. The DIMT allows for the scheduling and monitoring of de-icing operations. It is an internet browser-based tool that addresses three distinct procedures for de-icing:</p> <ul style="list-style-type: none"> <li>- Remote de-icing, which occurs at a specific location on the airport away from the parking stand;</li> <li>- On-stand de-icing, which occurs just before the aircraft leaves its stand; and</li> <li>- After-push de-icing, which occurs after the aircraft has pushed back from the stand and is positioned to start taxiing after de-icing.</li> </ul>	N	N
#117	Reducing Landing Minima in Low Visibility Conditions using Enhanced Flight Vision Systems (EFVS)	<p>The SESAR Solution "Reducing landing minima in low visibility conditions using enhanced Flight vision systems (EFVS)" is intended for flight crews, and corresponds to the use of EFVS visual based technologies displayed in HUD or an equivalent display system. The objective is to provide operational credit in approach as permitted per EASA EU 965/2012 and its coming amendments (NPA 2018-06 AWO) to face to Low visibility conditions.</p> <p>Enabling EFVS operations with operational credits provides a greater availability of suitable destination and alternate aerodromes during periods of reduced visibility.</p> <p>This effectively reduces the number of weather-related delays, cancellations or diversions of flights to CAT II/III</p>	N	N

SESAR Solution Code	SESAR Solution Title	Solution Description	Has the SESAR Solution been implemented in your State? (Y-N) - if "Yes" please report where	Are there implementation plans in your State for the SESAR Solution? (Y-N-N/A) - If "Yes" please report when and where implementation is planned - If "N/A" please provide justification
		<p>aerodromes, permits shorter routings and reduced fuel costs, a faster return to scheduled operations, and less passenger inconveniences.</p> <p>A unique advantage of the EFVS on board solution is that it is mainly supported by the aircraft system instead of airports and the need of complex and costly ground infrastructures as those implemented in CATII/III airports.</p> <p>From a global ATM network standpoint, the EFVS operation allows to retain traffic at most of secondary aerodromes by providing operational credit at most of runway ends with precision or non-precision landing minima (LPV, LNAV/VNAV, ILS CAT1,...). The operational credit provided by EFVS is particularly important regarding secondary aerodromes because they usually have CAT1 or higher than CAT 1 RVR &amp; DA/DH minima and are therefore potentially more frequently impacted by adverse weather conditions.</p> <p>In addition, EFVS capability is a key operational advantage more especially for the business aviation community that is mainly composed of small/ medium operators with limited resources and operating frequently at small/ medium airports.</p> <p>Beyond operational credit, the Vision Systems such as the EFVS improves situational awareness in all weather conditions for all operators at all airports contributing supporting decision-making and increasing safety margin all the time.</p>		
 <div>Advanced Air Traffic Services</div>				
#06	Controlled time of arrival (CTA) in medium-density/ medium-complexity environments	The CTA (Controlled Time of Arrival) is an ATM imposed time constraint on a defined point associated with an arrival runway, using airborne capabilities to improve arrival management. When a time constraint is needed for a flight, the ground system may calculate a CTA as part of the arrival management process, and then it may be proposed to the flight	N	N

SESAR Solution Code	SESAR Solution Title	Solution Description	Has the SESAR Solution been implemented in your State? (Y-N) - if "Yes" please report where	Are there implementation plans in your State for the SESAR Solution? (Y-N-N/A) - If "Yes" please report when and where implementation is planned - If "N/A" please provide justification
		for achievement by avionics within required accuracy. Airborne information may be used by the ground system in determining the CTA (e.g. ETA min/max) and in monitoring the implementation of the CTA.		
#08	Arrival management into multiple airports	The system provides support to coordination of traffic flows into multiple airports to enable a smooth delivery to the runways. The 'Center Manager' (CMAN) which accompanies the AMANs of the airports generates a combined planning for several arrival streams into different airports by calculating the sequence of aircraft flying towards an area where their routes intersect. By imposing an adequate spacing of the aircraft in that area, a Time To Lose (TTL) for the appropriate upstream E-TMA sector is calculated to meet this constraint. Both AMAN-TTL for the runway and TTL for the E-TMA sector are superimposed and presented to the upstream en-route sector controllers.	N	N/A When applicable individual AMMANs will be operational for each individual relevant airport
#10	Optimised route network using advanced RNP	Based on Advanced-RNP navigation specification, design of optimised routes e.g. spaced parallel routes, Fixed Radius Transition (FRT) and Tactical Parallel Offset (TPO) further enhanced by onboard performance monitoring and alerting and the execution of more predictable aircraft behaviour	N	N/A No routes in operation, FRA operational
#11	Continuous descent operations (CDO) using point merge	Progressive implementation of procedures for Continuous Descent Operations (CDO) and Continuous Climb Operations (CCO) in higher density traffic or to higher levels, optimised for each airport arrival/departure procedure	N	N
#105	Enhanced airborne collision avoidance system (ACAS) operations using the autoflight system	New altitude capture laws aim to reduce unnecessary ACAS alarms and reduce the risk of mid-air or near mid-air collisions between aircraft as a last-resort safety net, by automatically reducing the vertical rate at the approach of the selected flight level (only when a Traffic Advisories-TA occurs), leading to less traffic perturbation, while not increasing flight crew workload.	N	N

SESAR Solution Code	SESAR Solution Title	Solution Description	Has the SESAR Solution been implemented in your State? (Y-N) - if "Yes" please report where	Are there implementation plans in your State for the SESAR Solution? (Y-N-N/A) - If "Yes" please report when and where implementation is planned - If "N/A" please provide justification
#107	Point merge in complex terminal airspace	This new procedure design builds upon precision navigation technology (P-RNAV concept) for merging traffic into a single entry point, which allows efficient integration and sequencing of inbound traffic together with Continuous Descent Approaches (CDA).	N	N
#108	Arrival Management (AMAN) and Point Merge	Point Merge in high density environment and complex Extended TMA (E-TMA) sectors replaces radar vectoring with a more efficient and simplified traffic synchronisation mechanism that reduces communication workload and increases collective traffic predictability.	N	N
#118	Basic EAP (Extended ATC Planning) function	<p>The basic Extended ATC Planner aims at bridging the gap between Air Traffic Flow and Capacity Management (ATFCM) and Air Traffic Control (ATC) providing real-time and fine-tuning measures to solve ATFCM hotspots and to perform early measures to alleviate complexity closest to ATC activities.</p> <p>The solution consists of an automated tool and associated procedures supporting the basic communication between the Local DCB position and the Controllers' Work Positions allowing the EAP and the ATC team in identifying, assessing and resolving local complexity situations. The basic EAP relies on a real time integrated process for managing the complexity of the traffic with capability to reduce traffic peaks through early implementation of fine-tuned solutions to solve workload imbalances at the local level, compatible with the short-term timeframe of execution phase of the flights.</p>	N	N
		Optimised ATM Network Services		
#57	User-driven prioritisation process (UDPP) departure	Airspace Users are allowed to change among themselves (via the pre-departure management process in CDM airports) the priority order of flights in the pre-departure sequence. The departure time will be automatically communicated/coordinated with the Network Management Function (NMF) via the DPI message as described in the A-CDM concept.	N	N

SESAR Solution Code	SESAR Solution Title	Solution Description	Has the SESAR Solution been implemented in your State? (Y-N) - if "Yes" please report where	Are there implementation plans in your State for the SESAR Solution? (Y-N-N/A) - If "Yes" please report when and where implementation is planned - If "N/A" please provide justification
 <b>Enabling Aviation Infrastructure</b>				
#67	AOC data increasing trajectory prediction accuracy	Europe's vision to achieve high-performing aviation by 2035 builds on the idea of trajectory-based operations – meaning that aircraft can fly their preferred trajectory while minimising constraints due to airspace and service configurations. SESAR has introduced an early version, which makes use of flight planning data sourced from airline operational control (AOC) to help controllers optimise aircraft flight paths. This solution represents an initial step towards the extended flight plan solution and flight and flow information for a collaborative environment (FF-ICE).	N	N
#100	ACAS Ground Monitoring and Presentation System	The ACAS provides resolution advisories (RAs) to pilots in order to avoid collisions. Controllers rely on pilots to report RAs by radio as they occur in accordance with ICAO regulations. However these reports can come late, incomplete or are, absent in some instances. This solution consists of a set of monitoring stations and a server system, which enable the continuous monitoring and analysis of ACAS RAs and coordination messages between airborne units from the ground.	N	N
#101	Extended hybrid surveillance	This solution consists of an enhanced TCAS capability, adding passive surveillance methods and reducing the need for active Mode-S interrogations. By making fewer active interrogations, this solution allows the aircraft to significantly reduce the usage of the 1090 MHz frequency.	N	N
#102	Aeronautical mobile airport communication system (AeroMACS)	The aeronautical mobile airport communication system (AeroMACS) offers a solution to offload the saturated VHF datalink communications in the airport environment and support new services. The technical solution AeroMACS is based on commercial 4G technology and uses the IEEE 802.16 (WiMAX) standard. Designed to operate in reserved (aeronautical) frequency bands, AeroMACS can be used for ANSPs, airspace users and airport authority communications, in compliance with SESAR's future communication infrastructure (FCI) concept. AeroMACS is an international standard and supports	N	N

SESAR Solution Code	SESAR Solution Title	Solution Description	Has the SESAR Solution been implemented in your State? (Y-N) - if "Yes" please report where	Are there implementation plans in your State for the SESAR Solution? (Y-N-N/A) - If "Yes" please report when and where implementation is planned - If "N/A" please provide justification
		globally harmonised and available capabilities according to ICAO Global Air Navigation Plan (GANP).		
#109	Air traffic services (ATS) datalink using Iris Precursor	The Iris Precursor offers a viable option for ATS datalink using existing satellite technology systems to support initial four-dimensional (i4D) datalink capability. The technology can be used to provide end-to-end air-ground communications for i4D operations, connecting aircraft and air traffic management ground systems.	N	N
#110	ADS-B surveillance of aircraft in flight and on the surface	The SESAR solution consists of the ADS-B ground station and the surveillance data processing and distribution (SDPD) functionality. The solution also offers mitigation techniques against deliberate spoofing of the ground system by outside agents. These techniques can also be used to cope with malfunctioning of avionics equipment. SESAR has contributed to the relevant standards, such as EUROCAE technical specifications, incorporating new functionalities developed for the ADS-B ground station, ASTERIX interface specifications as well as to the SDPD specifications.	N	N
#114	Composite Surveillance ADS-B / WAM	By allowing the use of ADS-B data that has been validated against data derived in parallel by a WAM system, the system can help to reduce the number of interrogations and number of replies and therefore reduce the 1030/1090 MHz RF load and improve spectrum efficiency. It achieves this through the integration of validated data items into the WAM channel, thereby preventing a need to re-interrogate the data item. Since the two surveillance layers share hardware components, the system offers improved cost efficiency. Furthermore, the use of the system contributes to an improved security by successfully mitigating associated ADS-B threats. SESAR has contributed to the relevant standards, such as EUROCAE technical specifications for WAM and ADS-B that are implementing this "composite" concept.	N	N

## F. Military Organisations Infrastructure

This Annex is not produced in 2019. It will be updated every second year, therefore it will be produced as part of the LSSIP 2020 document.

In case information is sought on military infrastructure, previous LSSIP may be made available upon request to the respective Focal Point and/or Contact Person.

## G. Glossary of abbreviations

This Annex mainly shows the abbreviations that are specific to the LSSIP Document for Croatia.

Other general abbreviations are in the Acronyms and Abbreviations document in:

<https://www.eurocontrol.int/airial/>

Term	Description
ADS	Automatic Dependent Surveillance
APT	Airport Operations (domain)
ARN	ATS Route Network
CCAA	Croatian Civil Aviation Agency
CCL	Croatia Control Ltd.
COM	Communications (domain)
CP	Contact Person
DGCA	Directorate General for Civil Aviation, Electronic Communications and Postal Services
ECAA	European Common Aviation Area
ESSIP	European Single Sky ImPlementation
ESARR	EUROCONTROL Safety Regulatory Requirements
FAB CE	Functional Airspace Block Central Europe
FT	Fast Track
JAA	Joint Aviation Authorities
MIL	Military
MSTI	Ministry of the Sea, Transport and Infrastructure
MS	Member State
MSAW	Minimum Safe Altitude Warning
MSSR	Monopulse Secondary Surveillance Radar
MTCD	Medium Term Conflict Detection
OPS	Operations
OR	Operational Requirements
PC	Provisional Council
PCP	Pilot Common Project
PDP	Preliminary Deployment Programme
PSR	Primary Surveillance Radar
R&D	Research and Development
REG	Regulatory Authority
S-AF	Sub ATM Functionality
SLoA	Stakeholder Line of Action
SSR	Secondary Surveillance Radar
SUR	Surveillance (domain)
USE	Airspace User
VDL	VHF data link
VOR	VHF Omni directional Range
