

NM User Days 2022

Supporting Infrastructure Services: EAD User Experience

Johan Caroen
Head of AIM

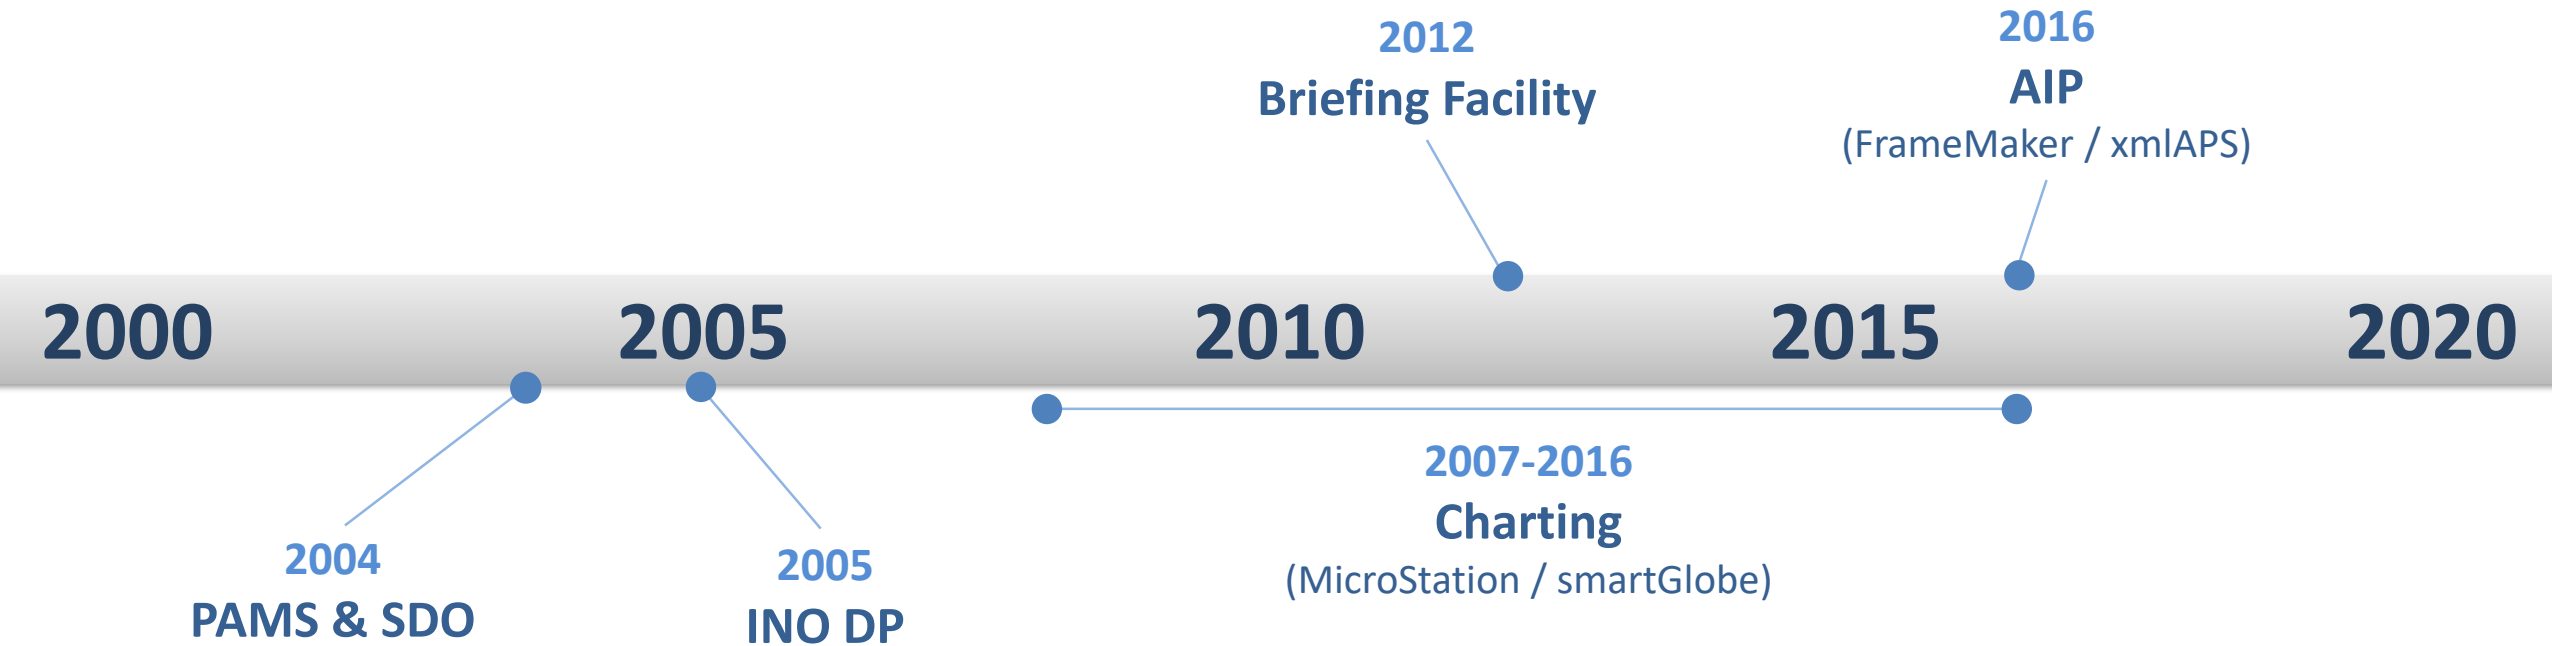

About skeyes and AIM Belgium

Civil-military integration with Belgian Defence:

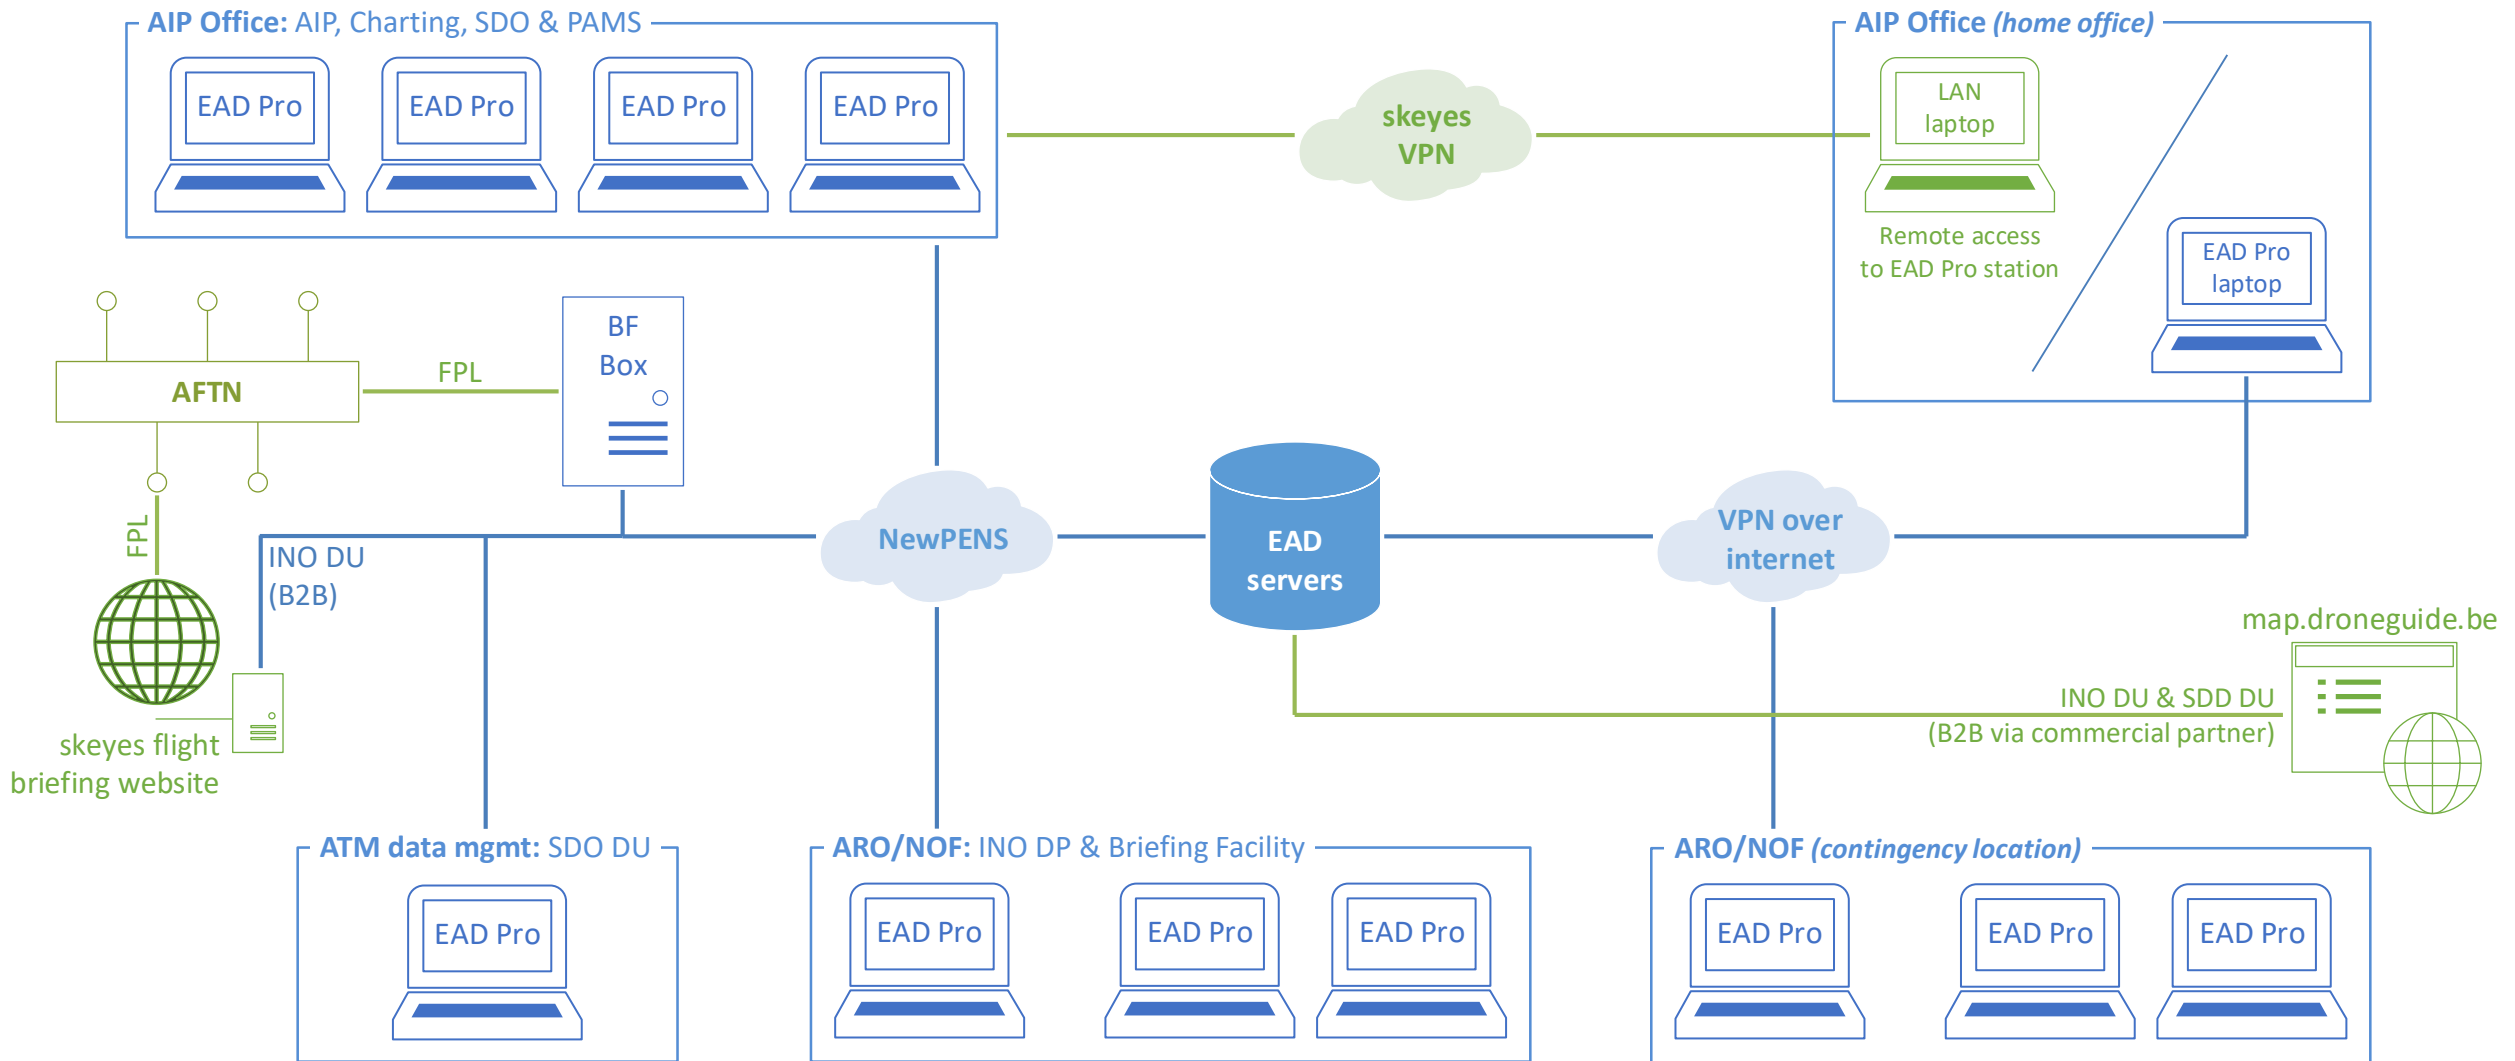

AIM|Belgium

Migration to EAD

➔ Currently EAD is used for all AIS and ARO operations

Local EAD Setup

Upcoming Plans

- Migration to AIXM 5.1 (DEC 2022)
- Implementation of new AIM data portal / flight briefing website
- Introduction of AIP Data Set and Instrument Procedure Design Data Set
- Migration to new eEAD modules (iNM)

Pros and Cons of Being EAD Pro User

- Very cost-effective solution
- Regulatory changes and enhancements at system level implemented without local effort
- No exchange or consistency problems between EAD and local database
- Global AIS data readily available
- Customization possibilities limited (lengthy change process)
- Limited fallback possibilities in case of EAD outage
- Implementation of regulatory requirements depends from EAD

Thank you!
