## Lessons Learned

**Javier ROSENDO**  
NMD/INF/PAS  
EUROCONTROL

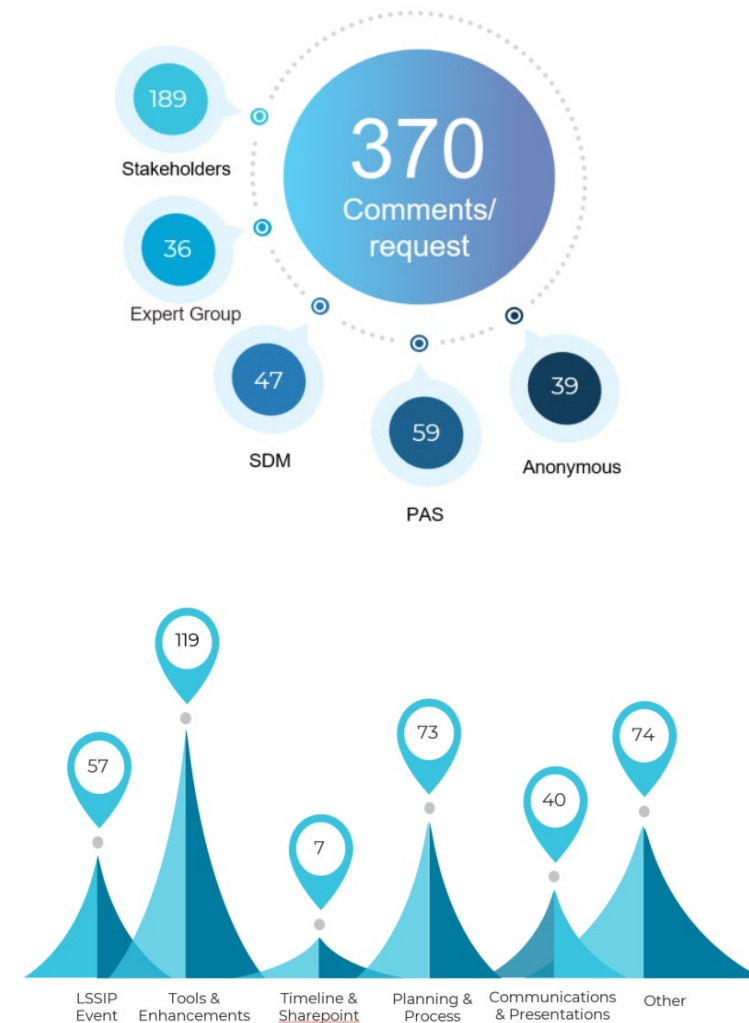

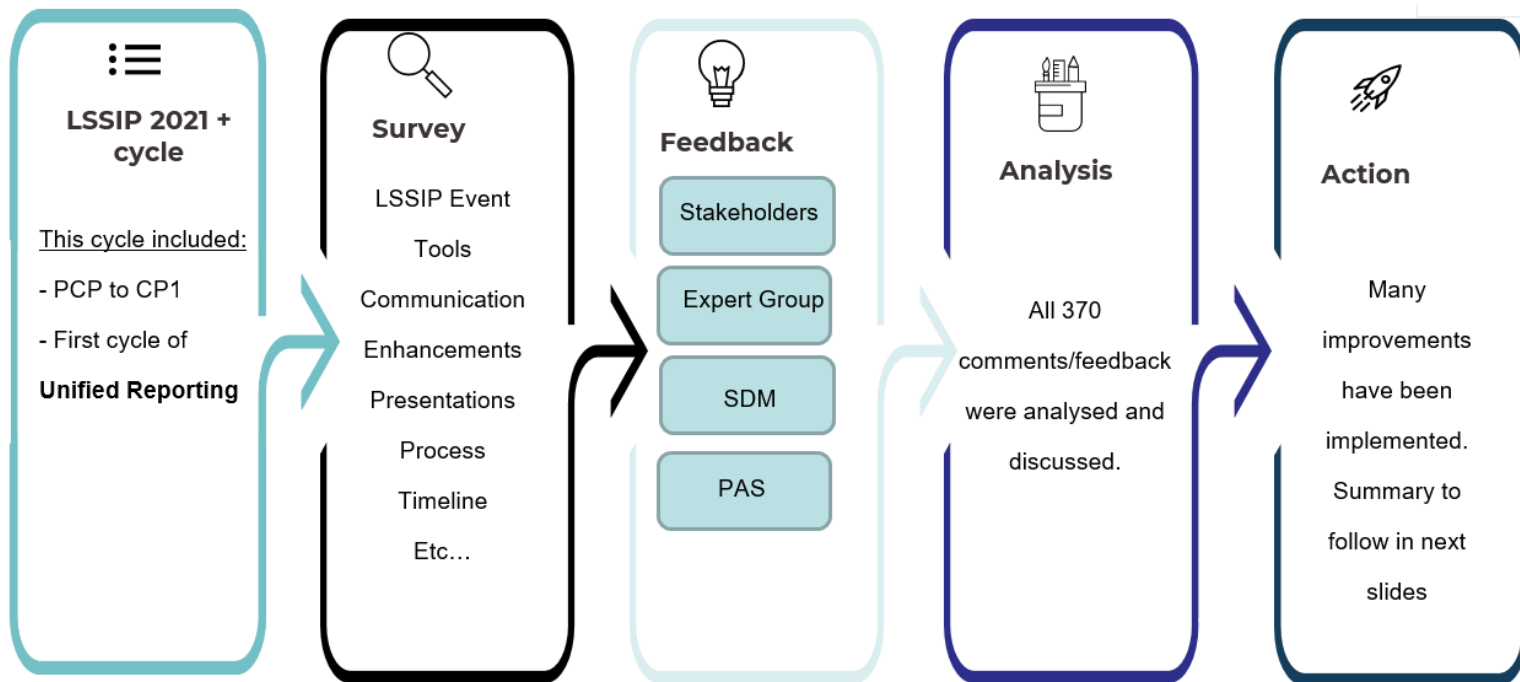

27<sup>th</sup> October 2022

NETWORK  
MANAGER

**2021 – First cycle *with unified reporting***  
– Change from PCP to CP1

The feedback received analyzed and discussed covered **370** comments & requests.

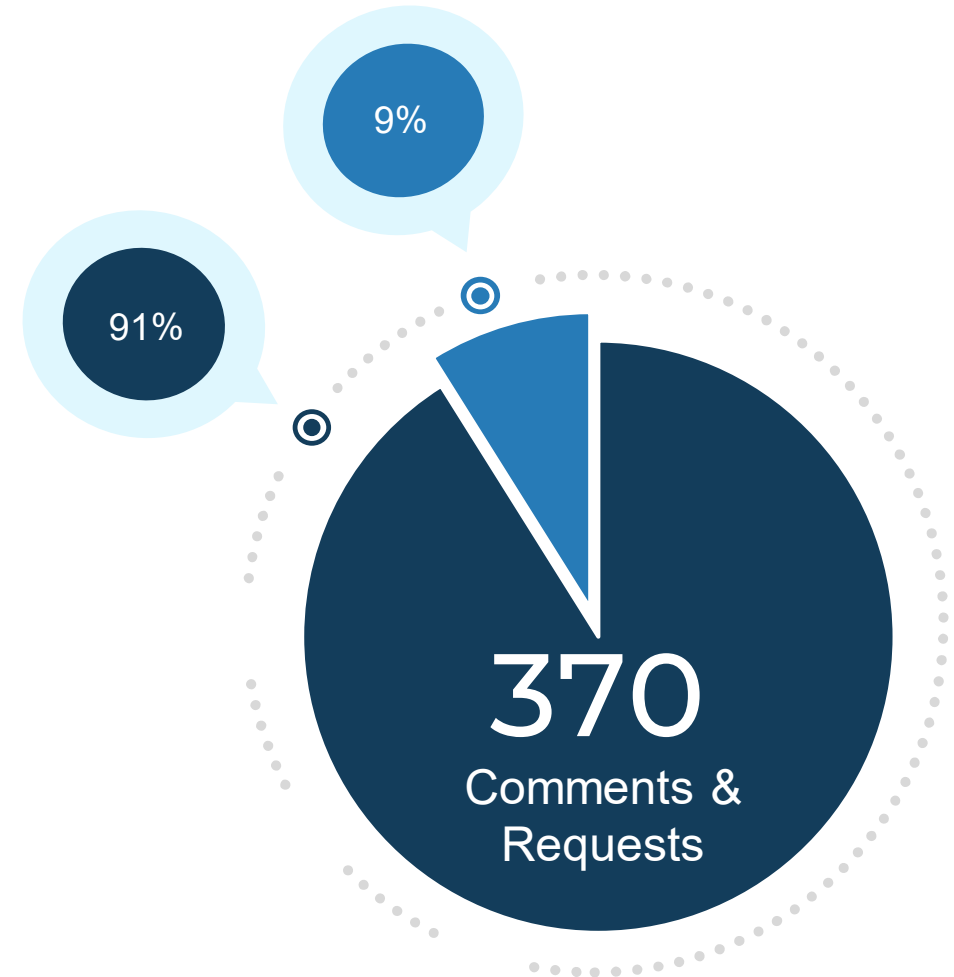

Most of requested improvements have been implemented for LSSIP 2022+ cycle

91% were taken on-board resulting in improvement for this new cycle

9% were not taken on-board

## Lessons Learned and Improvements

### Easy start of the coming cycle

- Publication of Flyer including main Milestones
- Publication of Educational Material, Working Instructions
- Webinar for newcomers with specific focus on how to use the tools

### Improved Timeline

- Timeline adapted and better aligned with regards to process with simplified milestones
- Data Cross check period better defined & described

### LSSIP+ DB improvements

- Change Request process adapted to avoid overload and/or duplication
- Bugs and issues with reports have been tackled
- Stabilisation process linked to warnings
- All large changes implemented in LSSIP Tool before beginning of cycle

## Lessons Learned and Improvements

### Simplified Planning

Alignments and linking of documents behind the scene

ESSIP - more explanation on some SLoAs available in note field

### SharePoint

Migrated to the new platform

Working with more browsers

### Presentations

Balance between presentations

List of acronyms available

All presentations available on Sharepoint

## Lessons Learned and pending Improvements

### Feedback

not clear and no clarification received  
not clear and source is anonymous

### Some improvements are depending on new PRM platform

E.g. Applicability area described differently in different places → The rules behind the AA explanations are complex and not easy to update.

### Request is too complex or lengthy for now

# LSSIP+ Best Practices (IAA ANSP Slides)

## The “System”

- LSSIP+ Database the single source of truth
- Accurate data in = Accurate data out
- Report generation to better inform relevant project teams a big plus
- Ability to tailor output including SDM families and specific SLoAs
- Usability and familiarity with the system born from evolution
- Trust the warnings, they work!
- The database helps in managing information rather than having deeper technical understanding

# LSSIP+ Best Practices (IAA ANSP Slides)

## The “Human”

- Before:
  - Single FP relies on broad data gathering from multiple sources
  - Chasing the data
  - No shortcuts
- Now:
  - CP1 allows for prioritisation of tasks and objectives
  - Larger team with multiple expertise gives better product
  - Database allows better ownership for the ANSP and other stakeholders
  - Project management can be served by the LSSIP+ Database
