John Stewart

Vice Chair UECNA

Aren't planes getting quieter? So what the problem?

Three areas of concern for communities:

1. Increase in flight numbers

2. More concentrated flight paths

3. When change takes place

Solutions (1)

- The solutions most likely to last are those which work for communities, airports and airlines

- That requires on-going engagement with communities, allowing them to be partners in shaping any solutions.

Solutions (2)

- **Respite** – to provide a break from the noise

- **A cap (limit)** on the number of aircraft permitted over a particular community

- Aircraft as **high** as possible for as long as possible

- Generous **mitigation** and **compensation**

- **Limit night flights**
